(54) Title: CALCITONIN GENE RELATED PEPTIDE RECEPTOR ANTAGONISTS

(57) Abstract: The present invention relates to compounds of Formula (I), as antagonists of calcitonin gene-related peptide receptors ("CGRP-receptor"), pharmaceutical compositions comprising them, methods for identifying them, methods of treatment using them and their use in therapy for treatment of neurogenic vasodilation, neurogenic inflammation, migraine and other headaches, thermal injury, circulatory

shock, flushing associated with menopause, airway inflammatory diseases, such as asthma and chronic obstructive pulmonary disease (COPD), and other conditions the treatment of which can be effected by the antagonism of CGRP-receptors.

CALCITONIN GENE RELATED PEPTIDE RECEPTOR ANTAGONISTS

Field of the Invention

The present invention relates to novel small molecule antagonists of
5 calcitonin gene-related peptide receptors ("CGRP-receptor"), pharmaceutical
compositions comprising them, methods for identifying them, methods of treatment
using them and their use in therapy for treatment of neurogenic vasodilation,
neurogenic inflammation, migraine, cluster headache and other headaches, thermal
injury, circulatory shock, flushing associated with menopause, airway inflammatory
10 diseases, such as asthma and chronic obstructive pulmonary disease (COPD), and
other conditions the treatment of which can be effected by the antagonism of CGRP-
receptors.

Background of the Invention

15 Calcitonin gene-related peptide (CGRP) is a naturally occurring 37-amino-
acid peptide first identified in 1982 (Amara, S. G. et al, *Science* 1982, 298, 240-244).
Two forms of the peptide are expressed (α CGRP and β CGRP) which differ by one
and three amino acids in rats and humans, respectively. The peptide is widely
distributed in both the peripheral (PNS) and central nervous system (CNS),
20 principally localized in sensory afferent and central neurons, and displays a number
of biological effects, including vasodilation.

When released from the cell, CGRP binds to specific cell surface G protein-
coupled receptors and exerts its biological action predominantly by activation of
intracellular adenylate cyclase (Poyner, D. R. et al, *Br J Pharmacol* 1992, 105, 441-7;
25 Van Valen, F. et al, *Neurosci Lett* 1990, 119, 195-8.). Two classes of CGRP
receptors, CGRP₁ and CGRP₂, have been proposed based on the antagonist properties
of the peptide fragment CGRP(8-37) and the ability of linear analogues of CGRP to
activate CGRP₂ receptors (Juaneda, C. et al. *TiPS* 2000, 21, 432-438). However,
there is lack of molecular evidence for the CGRP₂ receptor (Brain, S. D. et al, *TiPS*
30 2002, 23, 51-53). The CGRP₁ receptor has three components: (i) a 7 transmembrane
calcitonin receptor-like receptor (CRLR); (ii) the single transmembrane receptor
activity modifying protein type one (RAMP1); and (iii) the intracellular receptor
component protein (RCP) (Evans B. N. et al., *J Biol Chem.* 2000, 275, 31438-43).

RAMP1 is required for transport of CRLR to the plasma membrane and for ligand binding to the CGRP-receptor (McLatchie, L. M. et al, *Nature* 1998, 393, 333-339). RCP is required for signal transduction (Evans B. N. et al., *J Biol Chem.* 2000, 275, 31438-43). There are known species-specific differences in binding of small
5 molecule antagonists to the CGRP-receptor with typically greater affinity seen for antagonism of the human receptor than for other species (Brain, S. D. et al, *TIPS* 2002, 23, 51-53). The amino acid sequence of RAMP1 determines the species selectivity, in particular, the amino acid residue Trp74 is responsible for the phenotype of the human receptor (Mallee et al. *J Biol Chem* 2002, 277, 14294-8).

10 Inhibitors at the receptor level to CGRP are postulated to be useful in pathophysiologic conditions where excessive CGRP receptor activation has occurred. Some of these include neurogenic vasodilation, neurogenic inflammation, migraine, cluster headache and other headaches, thermal injury, circulatory shock, menopausal flushing, and asthma. CGRP receptor activation has been implicated in the
15 pathogenesis of migraine headache (Edvinsson L. *CNS Drugs* 2001;15(10):745-53; Williamson, D. J. *Microsc. Res. Tech.* 2001, 53, 167-178.; Grant, A. D. *Brit. J. Pharmacol.* 2002, 135, 356-362.). Serum levels of CGRP are elevated during migraine (Goadsby PJ, et al. *Ann Neurol* 1990;28:183-7) and treatment with anti-migraine drugs returns CGRP levels to normal coincident with alleviation of
20 headache (Gallai V. et al. *Cephalalgia* 1995;15: 384-90). Migraineurs exhibit elevated basal CGRP levels compared to controls (Ashina M, et al., *Pain.* 2000;86(1-2):133-8.2000). Intravenous CGRP infusion produces lasting headache in migraineurs (Lassen LH, et al. *Cephalalgia.* 2002 Feb;22(1):54-61). Preclinical studies in dog and rat report that systemic CGRP blockade with the peptide
25 antagonist CGRP(8-37) does not alter resting systemic hemodynamics nor regional blood flow (Shen, Y-T. et al, *J Pharmacol Exp Ther* 2001, 298, 551-8). Thus, CGRP-receptor antagonists may present a novel treatment for migraine that avoids the cardiovascular liabilities of active vasoconstriction associated with non-selective 5-HT_{1B/1D} agonists, 'triptans' (e.g., sumatriptan).

30 There are various *in vivo* migraine models known in the literature (see De Vries, P. et al, *Eur J Pharmacol* 1999, 375, 61-74). Some electrically stimulate the trigeminal ganglion and measure dilation of the intracranial vessels which they

innervate (e.g., Williamson et al. *Cephalalgia* 1997 17:518-24). Since facial arteries are also innervated by the trigeminal nerve, other models study changes in facial blood flow induced by electrical trigeminal activation (e.g., Escott et al. *Brain Res* 1995 669:93). Alternatively, other peripheral nerves (e.g., saphenous) and vascular beds (e.g., abdominal blood flow) are also studied (e.g., Escott et al. *Br J Pharmacol* 1993 110, 772-6;). All models have been shown to be blocked by pretreatment with the peptide antagonist CGPR(8-37) a peptide fragment that is absent the 1st seven residues, or by a small molecule CGRP-receptor antagonist. In some instances, exogenous CGRP has been used as a stimulus. However, these models are all invasive terminal procedures, and none have shown the clinically important abortive effect of reversing an established increase in artery dilation or increased blood flow using post-treatment of a CGRP-receptor antagonist. Williamson et al. *Cephalalgia* 1997 17:518-24, and Williamson et al. *Cephalalgia*. 1997 17:525-31: used *inter alia* i.v. CGRP as a stimulus to increase intracranial dural artery diameter in sodium pentobarb anesthetized rats employing a terminal 'intravital' procedure that involved drilling to thin the skull and the creation of a closed cranial window to visualize dural arteries. The effect was blocked by pretreatment with i.v. CGRP(8-37). Escott et al. *Brain Res* 1995 669:93; *inter alia* drilled into the rat skull and used brain electrodes to electrically stimulate the trigeminal ganglion and measured laser Doppler facial blood flow in a terminal procedure in sodium pentobarb anesthetized rats involving neuromuscular blockade, tracheal intubation and artificial ventilation. The effect was blocked by pretreatment with CGRP(8-37). Escott et al. *Br J Pharmacol* 1993 110, 772-6; *inter alia* used intradermal (i.d.) CGRP as the stimulus to increase blood flow in rat abdominal skin of sodium pentobarb anesthetized animals outfitted with cannulated jugular veins for anesthetic and drug delivery. The effect was blocked by pretreatment with i.v. CGRP(8-37). Chu et al. *Neurosci Lett* 2001 310, 169-72 used *inter alia* i.d. CGRP as the stimulus in rats and measured laser Doppler changes in blood flow in the skin of the back in a terminal method using sodium pentobarb anesthetized and tracheal cannulated animals; and showed pretreatment blockade by continuous release of CGRP(8-37) from subcutaneously (s.c.) implanted osmotic pumps. Hall et al *Br J Pharmacol* 1995 114, 592-7 and Hall et al *Br J Pharmacol* 1999 126, 280-4 *inter alia* used topical CGRP to increase hamster cheek pouch

arteriole diameter, and i.d. CGRP to increase blood flow in rat dorsal skin of sodium pentobarb anesthetized animals outfitted with cannulated jugular veins for anesthetic and drug delivery. The effect was blocked by pretreatment with i.v. CGRP(8-37).

Doods et al. Br J Pharmacol. 2000 Feb;129(3):420-3 *inter alia* drilled into the skull
5 of the marmoset (new world monkey) and used brain electrodes to produce electrical stimulation of the trigeminal ganglion and measured facial blood flow in an invasive terminal procedure involving neuromuscular blockade and artificial ventilation of sodium pentobarbital anesthetized primates. Increase in flow was blocked by pre-treatment of a small molecule CGRP antagonist. *See also* WO 03/272252 Isolated
10 DNA Molecules Encoding Humanized Calcitonin Gene-Related Peptide Receptor, Related Non-Human Transgenic Animals and Assay Methods. Thus the method of the present invention procedure being *inter alia* a non-invasive survival model in primates measuring exogenous CGRP-induced changes in facial blood flow and demonstrating pre- and post-treatment effects of peptide and small molecule CGRP
15 antagonists in spontaneously breathing isoflurane anesthetized marmosets who recover from the procedure offers significant advantages.

A number of non-peptidic, small molecule CGRP-receptor antagonists have been recently reported. WO 97/09046 and equivalents disclose *inter alia* quinine and quinidine related compounds which are ligands, in particular antagonists, of CGRP-
20 receptor. WO 98/09630 and WO 98/56779 and equivalents disclose *inter alia* variously substituted, nitrobenzamide compounds as CGRP-receptor antagonists. WO 01/32649, WO 01/49676, and WO 01/32648 and equivalents disclose *inter alia* a series of 4-oxobutanamides and related cyclopropane derivatives as CGRP-receptor antagonists. WO 00/18764, WO 98/11128 and WO 00/55154 and equivalents
25 disclose *inter alia* benzimidazolyl piperidines as antagonists to CGRP-receptor. Unrelated to CGRP, a series of somatostatin antagonists have been disclosed in WO 99/52875 and WO 01/25228 and equivalents. *See also* U.S. 6,344,449, U.S. 6,313,097, U.S. 6,521,609, U.S. 6,552,043 and related applications. Thus, novel CGRP-receptor antagonists effective for the treatment of neurogenic inflammation,
30 migraine and other disorders would be greatly advantageous.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q' and R³ is R^{3b}.

20 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q', R³ is R^{3a} and p is 0 such that G, J and A together form GJA".

25 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q' and Q' is (S^y)_sR³ and s is 0.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q' and Q' is $(S^y)_s R^3$, S^y is C_{1-3} alkylene and s is 1.

5 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q' and Q' is $(S^y)_s R^3$, S^y is C_{1-3} alkylidene and s is 1.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q' and U is CH_2 .

10 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q', Q' is $(S^y)_s R^3$, s is 0 and U is CH_2 .

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q', Q' is $(S^y)_s R^3$, S^y is C_{1-3} alkylene, s is 1 and U is CH_2 .

15 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q', Q' is $(S^y)_s R^3$, S^y is C_{1-3} alkylidene, s is 1 and U is CH_2 .

20 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q' and U is NH.

25 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q', Q' is $(S^y)_s R^3$, s is 0 and U is NH.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q', Q' is $(S^y)_s R^3$, S^y is C_{1-3} alkylene, s is 1 and U is NH.

30 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the

present invention wherein Q is Q', Q' is $(S^y)_s R^3$, S^y is C_{1-3} alkylidene, s is 1 and U is NH.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q".

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and Q" is $NH(S^y)_s R^3$.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and Q" is $NH(S^y)_s R^3$ and s is 0.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and Q" is $NH(S^y)_s R^3$, S^y is C_{1-3} alkylene and s is 1.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and Q" is $NH(S^y)_s R^3$, S^y is C_{1-3} alkylidene and s is 1.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and Q" is $NHC(O)(S^y)_s R^3$.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and Q" is $NHC(O)(S^y)_s R^3$ and s is 0.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and Q" is $NHC(O)(S^y)_s R^3$, S^y is C_{1-3} alkylene and s is 1.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and Q" is $NHC(O)(S^y)_s R^3$, S^y is C_{1-3} alkylidene and s is 1.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and Q" is $\text{NHC(O)O(S}^y)_s\text{R}^3$.

5 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and Q" is $\text{NHC(O)O(S}^y)_s\text{R}^3$ and s is 0.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and Q" is $\text{NHC(O)O(S}^y)_s\text{R}^3$, S^y is C_{1-3} alkylene and
10 s is 1.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and Q" is $\text{NHC(O)O(S}^y)_s\text{R}^3$, S^y is C_{1-3} alkylidene and s is 1.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and Q" is $\text{NHC(O)NH(S}^y)_s\text{R}^3$, S^y is C_{1-3} alkylene and s is 1.

25 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and Q" is $\text{NHC(O)NH(S}^y)_s\text{R}^3$, S^y is C_{1-3} alkylidene and s is 1.

30 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein V is OR^4 .

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein V is OR⁴ and R⁴ is C₁₋₆alkyl.

5 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein V is -N(R¹)(R²).

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein

10 V is -N(R¹)(R²) or OR⁴;

R⁴ is H, C₁₋₆alkyl, C₁₋₄haloalkyl, (C₁₋₄alkylene)₀₋₁R^{4'}

R^{4'} is C₃₋₇cycloalkyl, phenyl, adamantyl, quinuclidyl,
azabicyclo[2.2.1]heptyl, azetidiny, tetrahydrofuranyl, furanyl,
dioxolanyl, thienyl, tetrahydrothienyl, pyrrolyl, pyrrolinyl,
15 pyrrolidinyl, imidazolyl, imidazoliny, imidazolidinyl,
pyrazolyl, pyrazoliny, pyrazolidinyl, oxazolyl, isoxazolyl,
thiazolyl, isothiazolyl, oxadiazolyl, thiadiazolyl, triazolyl,
pyranyl, pyridyl, pyrimidinyl, pyrazinyl, pyridazinyl,
triazinyl, piperidinyl, piperazinyl, morpholino, thiomorpholino
20 or dioxolanyl; and

R^{4'} is optionally substituted with 1 or 2 of the same or different
substituents selected from the group consisting of halo,
cyano, C₁₋₄alkyl, C₁₋₄haloalkyl, C₁₋₄alkoxy, hydroxy,
amino, C₃₋₇cycloalkyl, C₁₋₃alkylamino, C₁-
25 3dialkylamino, (C₁₋₃alkyl)₀₋₂ureido, phenyl and benzyl;

R^{4'} optionally contains 1 or 2 carbonyls wherein the carbon
atom of said carbonyl is a member of the ring structure
of R^{4'};

30 R¹ and R² are each independently L¹, wherein L¹ is selected from the
group consisting of H, C₁₋₆alkyl, -C₁₋₆alkylene-amino(C₁-

-17-

₃alkyl)₂, C₃₋₇cycloalkyl, phenyl, adamantyl, azetidiny, tetrahydrofuranyl, furanyl, dioxolanyl, thienyl, tetrahydrothienyl, pyrrolyl, pyrrolinyl, pyrrolidinyl, imidazolyl, imidazoliny, imidazolidinyl, pyrazolyl, pyrazolinyl, pyrazolidinyl, oxazolyl, isoxazolyl, thiazolyl, isothiazolyl, oxadiazolyl, thiadiazolyl, triazolyl, pyranyl, pyridyl, pyrimidinyl, pyrazinyl, pyridazinyl, triazinyl, piperidinyl, piperazinyl, morpholino, thiomorpholino and dioxolanyl; and

R¹ and R² are each optionally and independently substituted with 1 or 2 of the same or different substituents selected from the group consisting of halo, cyano, C₁₋₄alkyl, C₁₋₄haloalkyl, C₁₋₄alkoxy, hydroxy, amino, C₃₋₇cycloalkyl, C₁₋₃alkylamino, C₁₋₃dialkylamino, (C₁₋₃alkyl)₀₋₂ureido, phenyl and benzyl;

R¹ and R² optionally and independently contain 1 or 2 carbonyls wherein the carbon atom of said carbonyl is a member of the heterocycles comprising R¹ and R²;

wherein L¹ is optionally interrupted from the nitrogen to which it is attached by L², wherein L² is C₁₋₃alkylene; or

R¹ and R² together with the nitrogen to which they are attached form X,

wherein X is azetidiny, pyrrolinyl, pyrrolidinyl, imidazoliny, imidazolidinyl, pyrazolinyl, pyrazolidinyl, azepiny, diazepiny, piperazinyl, piperidinyl, morpholino or thiomorpholino;

wherein X is optionally substituted with Y, wherein Y is dioxolanyl, C₁₋₄alkyl, C₁₋₄alkylamino, C₁₋₄dialkylamino, C₁₋₄alkoxy, C₃₋₇cycloalkyl, phenyl, azetidiny, pyrrolyl, pyrrolinyl,

-18-

pyrrolidinyl, pyrrolidinonyl, imidazolyl,
imidazoliny, imidazolidinyl, imidazolidinonyl,
pyrazolyl, pyrazoliny, pyrazolidinyl, azepiny,
diazepiny, pyridyl, pyrimidinyl,
5 dihydrobenzimidazolonyl, piperaziny,
piperidinyl, morpholino, benzothiazolyl,
benzisothiazolyl or thiomorpholino;

and wherein X and Y are

optionally interrupted with Z, wherein Z
10 is -NHC(O)O-, -NHC(O)NH-,
NC(O)NH₂, -NH-, -C₁-
alkylene-, -C₁₋₃alkylene-
NHC(O)O-C₁₋₃alkylene-; and

optionally and independently substituted
15 with 1 or 2 of the same or
different substituents selected
from the group consisting of C₁-
alkyl, amino, C₁₋₃alkylamino,
-C₁₋₆alkylene-amino(C₁₋₃alkyl)₂,
20 (C₁₋₃alkyl)₀₋₂ureido, phenyl and
benzyl;

X and Y optionally and independently
contain 1 or 2 carbonyls wherein
the carbon atom of said carbonyl
25 is a member of the heterocycles
comprising X and Y;

provided that if X is substituted with Y, and if
X and Y are not interrupted with Z, then

X and Y optionally share one carbon atom and together form a spirocyclic moiety.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^4 is H, C_{1-6} alkyl, C_{1-4} haloalkyl or $(C_{1-4}alkylene)_{0-1}R^{4'}$; $R^{4'}$ is C_{3-7} cycloalkyl, phenyl, adamantyl, quinuclidyl, azabicyclo[2.2.1]heptyl, azetidiny, tetrahydrofuranyl, furanyl, dioxolanyl, thienyl, tetrahydrothienyl, pyrrolyl, pyrrolinyl, pyrrolidinyl, imidazolyl, imidazoliny, imidazolidinyl, pyrazolyl, pyrazolinyl, pyrazolidinyl, oxazolyl, isoxazolyl, thiazolyl, isothiazolyl, oxadiazolyl, thiadiazolyl, triazolyl, pyranyl, pyridyl, pyrimidinyl, pyrazinyl, pyridazinyl, triazinyl, piperidinyl, piperazinyl, morpholino, thiomorpholino or dioxolanyl; and $R^{4'}$ is optionally substituted with 1 or 2 of the same or different substituents selected from the group consisting of halo, cyano, C_{1-4} alkyl, C_{1-4} haloalkyl, C_{1-4} alkoxy, hydroxy, amino, C_{3-7} cycloalkyl, C_{1-3} alkylamino, C_{1-3} dialkylamino, $(C_{1-3}alkyl)_{0-2}$ ureido, phenyl and benzyl.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^4 is H, C_{1-6} alkyl, C_{1-4} haloalkyl or $(C_{1-4}alkylene)_{0-1}R^{4'}$; $R^{4'}$ is C_{3-7} cycloalkyl, phenyl, adamantyl, quinuclidyl, azabicyclo[2.2.1]heptyl, azetidiny, tetrahydrofuranyl, furanyl, dioxolanyl, thienyl, tetrahydrothienyl, pyrrolyl, pyrrolinyl, pyrrolidinyl, imidazolyl, imidazoliny, imidazolidinyl, pyrazolyl, pyrazolinyl, pyrazolidinyl, oxazolyl, isoxazolyl, thiazolyl, isothiazolyl, oxadiazolyl, thiadiazolyl, triazolyl, pyranyl, pyridyl, pyrimidinyl, pyrazinyl, pyridazinyl, triazinyl, piperidinyl, piperazinyl, morpholino, thiomorpholino or dioxolanyl.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^4 is H, C_{1-6} alkyl or $(C_{1-4}alkylene)_{0-1}R^{4'}$; $R^{4'}$ is C_{3-7} cycloalkyl,.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein V is $-N(R^1)(R^2)$ and

-20-

R^1 and R^2 are each independently L^1 , wherein L^1 is selected from the group consisting of H, C_{1-6} alkyl, $-C_{1-6}$ alkylene-amino(C_{1-3} alkyl)₂, C_{3-7} cycloalkyl, phenyl, azetidiny, adamantyl, tetrahydrofuranyl, furanyl, dioxolanyl, thienyl, tetrahydrothienyl, pyrrolyl, pyrrolinyl, pyrrolidinyl, imidazolyl, imidazolinyl, imidazolidinyl, pyrazolyl, pyrazolinyl, pyrazolidinyl, oxazolyl, isoxazolyl, thiazolyl, isothiazolyl, oxadiazolyl, thiadiazolyl, triazolyl, pyranyl, pyridyl, pyrimidinyl, pyrazinyl, pyridazinyl, triazinyl, piperidinyl, piperazinyl, morpholino, thiomorpholino and dioxolanyl; or

R^1 and R^2 together with the nitrogen to which they are attached form X,

wherein X is azetidiny, pyrrolinyl, pyrrolidinyl, imidazolinyl, imidazolidinyl, pyrazolinyl, pyrazolidinyl, azepinyl, diazepinyl, piperazinyl, piperidinyl, morpholino or thiomorpholino;

wherein X is substituted with Y, wherein Y is dioxolanyl, C_{1-4} alkyl, C_{1-4} alkoxy, C_{3-7} cycloalkyl, phenyl, azetidiny, pyrrolyl, pyrrolinyl, pyrrolidinyl, pyrrolidinonyl, imidazolyl, imidazolinyl, imidazolidinyl, imidazolidinonyl, pyrazolyl, pyrazolinyl, pyrazolidinyl, azepinyl, diazepinyl, pyridyl, pyrimidinyl, dihydrobenzimidazolonyl, piperazinyl, piperidinyl, morpholino, benzothiazolyl, benzisothiazolyl or thiomorpholino;

and wherein X and Y optionally share one carbon atom and together form a spirocyclic moiety.

-21-

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein V is $-N(R^1)(R^2)$ and

5 R^1 and R^2 are each independently L^1 , wherein L^1 is selected from the group consisting of H, C_{1-6} alkyl, or

R^1 and R^2 together with the nitrogen to which they are attached form X,

wherein X is piperidinyl or morpholino;

10 wherein X is substituted with Y, wherein Y is dioxolanyl, C_{1-4} alkyl or piperidinyl;

and wherein X and Y optionally share one carbon atom and together form a spirocyclic moiety.

15 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein V is $-N(R^1)(R^2)$ and wherein R^1 and R^2 are each independently L^1 , wherein L^1 is selected from the group consisting of H, C_{1-6} alkyl.

20 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein V is $-N(R^1)(R^2)$ and wherein

R^1 and R^2 together with the nitrogen to which they are attached form X,

wherein X is piperidinyl or morpholino;

25 wherein X is substituted with Y, wherein Y is dioxolanyl, C_{1-4} alkyl or piperidinyl;

and wherein X and Y optionally share one carbon atom and together form a spirocyclic moiety.

-22-

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein V is $-N(R^1)(R^2)$ and wherein

5 R^1 and R^2 together with the nitrogen to which they are attached form X,

wherein X is piperidinyl;

wherein X is substituted with Y, wherein Y is piperidinyl.

10 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein V is $-N(R^1)(R^2)$ and wherein

R^1 and R^2 together with the nitrogen to which they are attached form X,

wherein X is morpholino;

15 wherein X is substituted with Y, wherein Y is C_{1-4} alkyl.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein V is $-N(R^1)(R^2)$ and wherein

20 R^1 and R^2 together with the nitrogen to which they are attached form X,

wherein X is piperidinyl;

wherein X is substituted with Y, wherein Y is C_{1-4} alkyl.

25 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein V is $-N(R^1)(R^2)$ and wherein

R^1 and R^2 together with the nitrogen to which they are attached form X,

wherein X is piperidinyl;

-23-

wherein X is substituted with Y, wherein Y is
dioxolanyl;

and wherein X and Y share one carbon atom and
together form a spirocyclic moiety.

5 According to another embodiment of the first aspect of the present invention
are provided compounds according to the first embodiment of the first aspect of the
present invention wherein X and Y are not interrupted with Z.

 According to another embodiment of the first aspect of the present invention
are provided compounds according to the first embodiment of the first aspect of the
10 present invention wherein X and Y are not interrupted with Z; and X and Y share one
carbon atom and together form a spirocyclic moiety

 According to another embodiment of the first aspect of the present invention
are provided compounds according to the first embodiment of the first aspect of the
present invention wherein R^3 is R^{3a} .

15 According to another embodiment of the first aspect of the present invention
are provided compounds according to the first embodiment of the first aspect of the
present invention wherein R^3 is R^{3b} .

 According to another embodiment of the first aspect of the present invention
are provided compounds according to the first embodiment of the first aspect of the
20 present invention wherein R^{3a} is a heterocycle having two fused rings with 5 to 7
members in each of said rings, said heterocycle containing one to five of the same or
different heteroatoms selected from the group consisting of O, N and S.

 According to another embodiment of the first aspect of the present invention
are provided compounds according to the first embodiment of the first aspect of the
25 present invention wherein R^{3a} is a heterocycle having two fused rings with 5 to 7
members in each of said rings, said heterocycle containing one to five of the same or
different heteroatoms selected from the group consisting of O, N and S and said
heterocycle optionally containing 1 or 2 carbonyls wherein the carbon atom of said
carbonyl is a member of said fused rings.

30 According to another embodiment of the first aspect of the present invention
are provided compounds according to the first embodiment of the first aspect of the

present invention wherein R^{3a} is a heterocycle having two fused rings with 5 to 7 members in each of said rings, said heterocycle containing one to five of the same or different heteroatoms selected from the group consisting of O, N and S and said heterocycle optionally containing 1 or 2 carbonyls wherein the carbon atom of said
 5 carbonyl is a member of said fused rings; wherein R^{3a} is optionally substituted with 1 to 3 of the same or different substituents selected from the group consisting of benzyl, phenyl, -O-phenyl, -O- C_{1-3} alkylphenyl, - C_{1-3} alkylene-OC(O)-phenyl, cyano, amino, nitro, halo, C_{1-3} mono-bi-tri-haloalkyl, C_{1-3} mono-bi-tri-haloalkoxy, C_{1-6} alkoxy, (C_{1-3} alkyl) $_{1-2}$ amine, -OR^{3'}, -C(O)R^{3'}, -C(O)O-R^{3'}, -O-C(O)R^{3'}, -N(R^{3'})₂,
 10 -C(O)N(R^{3'})₂, -N(R^{3'})C(O)(R^{3'})₂, -N(R^{3'})C(O)N(R^{3'})₂, -N(R^{3'})C(O)OR^{3'}, -O-C(O)N(R^{3'})₂, -N(R^{3'})SO₂R^{3'}, -SO₂N(R^{3'})₂ and -SO₂R^{3'}; R^{3'} is H or - C_{1-6} alkyl.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^{3a} is a 4 to 6 membered heterocycle containing one to
 15 three of the same or different heteroatoms selected from the group consisting of O, N and S.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^{3a} is a 4 to 6 membered heterocycle containing one to
 20 three of the same or different heteroatoms selected from the group consisting of O, N and S, optionally containing 1 to 2 carbonyls, wherein the carbon atom of said carbonyl is a member of said 4 to 6 membered heterocycle.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^{3a} is a 4 to 6 membered heterocycle containing one to
 25 three of the same or different heteroatoms selected from the group consisting of O, N and S, optionally containing 1 to 2 carbonyls, wherein the carbon atom of said carbonyl is a member of said 4 to 6 membered heterocycle; wherein R^{3a} is optionally substituted with 1 to 3 of the same or different substituents selected from the group
 30 consisting of benzyl, phenyl, -O-phenyl, -O- C_{1-3} alkylphenyl, - C_{1-3} alkylene-OC(O)-phenyl, cyano, amino, nitro, halo, C_{1-3} mono-bi-tri-haloalkyl, C_{1-3} mono-bi-tri-haloalkoxy, C_{1-6} alkoxy, (C_{1-3} alkyl) $_{1-2}$ amine, -OR^{3'}, -C(O)R^{3'}, -C(O)O-R^{3'}, -O-

-25-

$C(O)R^{3'}$, $-N(R^{3'})_2$, $-C(O)N(R^{3'})_2$, $-N(R^{3'})C(O)(R^{3'})_2$, $-N(R^{3'})C(O)N(R^{3'})_2$,
 $-N(R^{3'})C(O)OR^{3'}$, $-O-C(O)N(R^{3'})_2$, $-N(R^{3'})SO_2R^{3'}$, $-SO_2N(R^{3'})_2$ and $-SO_2R^{3'}$;
 $R^{3'}$ is H or $-C_{1-6}$ alkyl.

According to another embodiment of the first aspect of the present invention
 5 are provided compounds according to the first embodiment of the first aspect of the
 present invention wherein R^{3a} is C_{3-7} cycloalkyl.

According to another embodiment of the first aspect of the present invention
 are provided compounds according to the first embodiment of the first aspect of the
 present invention wherein R^{3a} is C_{3-7} cycloalkyl; wherein R^{3a} is optionally substituted
 10 with 1 to 3 of the same or different substituents selected from the group consisting of
 benzyl, phenyl, $-O$ -phenyl, $-O-C_{1-3}$ alkylphenyl, $-C_{1-3}$ alkylene- $OC(O)$ -phenyl, cyano,
 amino, nitro, halo, C_{1-3} mono-bi-tri-haloalkyl, C_{1-3} mono-bi-tri-haloalkyloxy, C_{1-6}
 alkoxy, $(C_{1-3}alkyl)_{1-2}$ amine, $-OR^{3'}$, $-C(O)R^{3'}$, $-C(O)O-R^{3'}$, $-O-C(O)R^{3'}$, $-N(R^{3'})_2$,
 $-C(O)N(R^{3'})_2$, $-N(R^{3'})C(O)(R^{3'})_2$, $-N(R^{3'})C(O)N(R^{3'})_2$, $-N(R^{3'})C(O)OR^{3'}$, $-O$ -
 15 $C(O)N(R^{3'})_2$, $-N(R^{3'})SO_2R^{3'}$, $-SO_2N(R^{3'})_2$ and $-SO_2R^{3'}$; $R^{3'}$ is H or $-C_{1-6}$ alkyl.

According to another embodiment of the first aspect of the present invention
 are provided compounds according to the first embodiment of the first aspect of the
 present invention wherein R^{3a} is carbazolyl, fluorenyl, phenyl, $-O$ -phenyl, $-O-C_{1-4}$
 alkylene-phenyl, or naphthyl.

According to another embodiment of the first aspect of the present invention
 20 are provided compounds according to the first embodiment of the first aspect of the
 present invention wherein R^{3a} is carbazolyl, fluorenyl, phenyl, $-O$ -phenyl, $-O-C_{1-4}$
 alkylene-phenyl, or naphthyl; wherein R^{3a} is optionally substituted with 1 to 3 of the
 same or different substituents selected from the group consisting of benzyl, phenyl, $-$
 25 O -phenyl, $-O-C_{1-3}$ alkylphenyl, $-C_{1-3}$ alkylene- $OC(O)$ -phenyl, cyano, amino, nitro,
 halo, C_{1-3} mono-bi-tri-haloalkyl, C_{1-3} mono-bi-tri-haloalkyloxy, C_{1-6} alkoxy, $(C_{1-3}$
 alkyl) $_{1-2}$ amine, $-OR^{3'}$, $-C(O)R^{3'}$, $-C(O)O-R^{3'}$, $-O-C(O)R^{3'}$, $-N(R^{3'})_2$, $-C(O)N(R^{3'})_2$,
 $-N(R^{3'})C(O)(R^{3'})_2$, $-N(R^{3'})C(O)N(R^{3'})_2$, $-N(R^{3'})C(O)OR^{3'}$, $-O-C(O)N(R^{3'})_2$,
 $-N(R^{3'})SO_2R^{3'}$, $-SO_2N(R^{3'})_2$ and $-SO_2R^{3'}$; $R^{3'}$ is H or $-C_{1-6}$ alkyl.

According to another embodiment of the first aspect of the present invention
 30 are provided compounds according to the first embodiment of the first aspect of the

present invention wherein R^{3a} is C_{1-8} alkyl, C_{2-7} alkenyl, $-C(O)R^{3'}$, $-C(O)O-R^{3'}$ or C_{2-7} alkynyl.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^{3a} is C_{1-8} alkyl, C_{2-7} alkenyl, $-C(O)R^{3'}$, $-C(O)O-R^{3'}$ or C_{2-7} alkynyl; wherein R^{3a} is optionally substituted with 1 to 3 of the same or different substituents selected from the group consisting of benzyl, phenyl, $-O$ -phenyl, $-O-C_{1-3}$ alkylphenyl, $-C_{1-3}$ alkylene- $OC(O)$ -phenyl, cyano, amino, nitro, halo, C_{1-3} mono-bi-tri-haloalkyl, C_{1-3} mono-bi-tri-haloalkyloxy, C_{1-6} alkoxy, $(C_{1-3}alkyl)_{1-2}$ amine, $-OR^{3'}$, $-C(O)R^{3'}$, $-C(O)O-R^{3'}$, $-O-C(O)R^{3'}$, $-N(R^{3'})_2$, $-C(O)N(R^{3'})_2$, $-N(R^{3'})C(O)(R^{3'})_2$, $-N(R^{3'})C(O)N(R^{3'})_2$, $-N(R^{3'})C(O)OR^{3'}$, $-O-C(O)N(R^{3'})_2$, $-N(R^{3'})SO_2R^{3'}$, $-SO_2N(R^{3'})_2$ and $-SO_2R^{3'}$; $R^{3'}$ is H or $-C_{1-6}$ alkyl; provided that if R^{3a} is $-C(O)R^{3'}$, $CHC(O)O-R^{3'}$, $CH(CH_3)C(O)O-R^{3'}$ or $-C(O)O-R^{3'}$, then said $-C(O)R^{3'}$, $CHC(O)O-R^{3'}$, $CH(CH_3)C(O)O-R^{3'}$ or $-C(O)O-R^{3'}$ are unsubstituted.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^3 is R^{3a} and R^{3a} is phenyl, hydroxyphenyl, azetidyl, naphthyl, C_{1-6} alkyl, C_{2-6} alkenyl, C_{2-6} alkynyl, dihydroquinolinonyl, hydroquinolinonyl, quinolinyl, dihydroisoquinolinonyl, hydroisoquinolinonyl, isoquinolinyl, dihydroquinazolinonyl, hydroquinazolinonyl, quinazolinyl, dihydroquinoxalinonyl, hydroquinoxalinonyl, quinoxalinyl, benzimidazolyl, indazolyl, dihydrobenzimidazolonyl, hydrobenzimidazolonyl, benzimidazolyl, dihydrobenzthiazolonyl, hydrobenzthiazolonyl, benzthiazolyl, dihydrobenzoxazolyl, benzotriazolyl, dihydrobenzothiophenonyl, hydrobenzothiophenonyl, benzothienyl, dihydrobenzofuranonyl, hydrobenzofuranonyl, benzofuranyl, benzdioxolanyl, dihydroindolonyl, hydroindolonyl, indolyl, indoliziny, isoindolyl, indoliny, indazolyl, pyrazolyl, pyrazolinyl, pyrazolidinyl, furanyl, thienyl, pyrrolyl, pyrrolinyl, pyrrolidinyl, imidazolyl, imidazolinyl, imidazolidinyl, pyridyl, purinyl, carbazolyl, pyrimidinyl, piperidinyl, triazolopyrimidinyl, tetrahydropyrazolopyridinyl, piperazinyl or morpholino; optionally substituted as provided in the first embodiment of the first aspect.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^3 is R^{3a} and R^{3a} is phenyl, naphthyl, indazolyl, benzimidazolyl, dihydrobenzoxazolyl, benzotriazolyl, benzothienyl, benzdioxolanyl, dihydroindolonyl, indolyl, furanyl, thienyl, pyridyl, purinyl, carbazolyl, piperidinyl, triazolopyrimidinyl, tetrahydropyrazolopyridinyl; optionally substituted as provided in the first embodiment of the first aspect.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^3 is R^{3a} and R^{3a} is dihydro-benzthiazolonyl, hydrobenzthiazolonyl, benzthiazolyl, dihydrobenzothiophenonyl, hydrobenzothiophenonyl, benzothienyl, dihydrobenzofuranonyl, hydrobenzofuranonyl, benzofuranyl, dihydroindolonyl, hydroindolonyl, indolyl, indoliziny, isoindolyl, indoliny or indazolyl; optionally substituted as provided in the first embodiment of the first aspect.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^3 is R^{3a} and R^{3a} is dihydrobenzoxazolyl, benzotriazolyl, indolyl, halonitrophenyl, halopyrimidine, halopurinyl, C_{1-3} alkyl-nitroaminopyrimidine, triazolopyrimidinyl, pyridyl, indazolyl, phenyl or benzdioxolanyl; optionally substituted as provided in the first embodiment of the first aspect.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^3 is R^{3a} and R^{3a} is naphthyl, phenyl-O-phenyl, or thienyl; optionally substituted as provided in the first embodiment of the first aspect.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^3 is R^{3b} .

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^3 is R^{3b} and R^{3b} is

5 dihydroindolonyl, hydroindolonyl, indoliziny, isoindolyl, indoliny, pyrazolyl, pyrazoliny, pyrazolidiny, furanyl, pyrroly, pyrroliny, pyrrolidiny, imidazoliny, imidazolidiny, puriny, carbazolyl, pyrimidiny, piperidiny, piperaziny or morpholino; optionally substituted as provided in the first embodiment of the first aspect.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^3 is R^{3b} and R^{3b} is dihydrobenzimidazolonyl, hydrobenzimidazolonyl, benzimidazoliny, dihydro-benzthiazolonyl, hydrobenzthiazolonyl, benzthiazolyl, dihydrobenzothiophenonyl, hydrobenzothiophenonyl, dihydrobenzofuranonyl, hydrobenzofuranonyl, 1H-indazol-5-yl, benzdioxolany, dihydrobenzoxazolyl, benzotriazolyl, dihydroindolonyl, hydroindolonyl, indoliziny, isoindolyl, indoliny, pyrazolyl, pyrazoliny, pyrazolidiny, furanyl, pyrroly, pyrroliny, pyrrolidiny, imidazoliny, imidazolidiny, puriny, carbazolyl, pyrimidiny, piperidiny, piperaziny or morpholino; optionally substituted as provided in the first embodiment of the first aspect.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^3 is R^{3b} and R^{3b} is azetidiny, C_{1-6} alkyl, C_{2-6} alkenyl, C_{2-6} alkynyl, dihydroquinolinonyl, hydroquinolinonyl, dihydroisoquinolinonyl, hydroisoquinolinonyl, dihydroquinazolinonyl, hydroquinazolinonyl, quinazoliny, dihydroquinoxalinonyl, hydroquinoxalinonyl, quinoxaliny, benzimidazolyl, 1H-indazol-5-yl, dihydrobenzimidazolonyl, hydrobenzimidazolonyl, benzimidazoliny, dihydro-benzthiazolonyl, hydrobenzthiazolonyl, benzthiazolyl, dihydrobenzothiophenonyl, hydrobenzothiophenonyl, dihydrobenzofuranonyl, hydrobenzofuranonyl, benzdioxolany, dihydrobenzoxazolyl, benzotriazolyl, puriny, carbazolyl, pyrimidiny, piperidiny, piperaziny or morpholino; optionally substituted as provided in the first embodiment of the first aspect.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^3 is R^{3b} and R^{3b} is azetidiny, C_{1-6} alkyl, C_{2-6} alkenyl, C_{2-6}

- alkynyl, dihydroquinolinonyl, hydroquinolinonyl, dihydroisoquinolinonyl, hydroisoquinolinonyl, dihydroquinazolinonyl, hydroquinazolinonyl, quinazolinyl, dihydroquinoxalinonyl, hydroquinoxalinonyl, quinoxalinyl, benzimidazolyl, benzdioxolanyl, dihydrobenzoxazolyl, benzotriazolyl, dihydroindolonyl, hydroindolonyl, 1H-indazol-5-yl, indoliziny, isoindolyl, indoliny, pyrazolyl, pyrazolinyl, pyrazolidinyl, furanyl, pyrrolyl, pyrroliny, pyrrolidinyl, imidazoliny, imidazolidinyl, puriny, carbazolyl, pyrimidinyl, piperidinyl, piperazinyl or morpholino; optionally substituted as provided in the first embodiment of the first aspect.
- 10 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^3 is R^{3b} and R^{3b} is benzdioxolanyl, dihydrobenzoxazolyl, benzotriazolyl, puriny, carbazolyl; optionally substituted as provided in the first embodiment of the first aspect.
- 15 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein R^3 is R^{3b} and R^{3b} is dihydrobenzoxazolyl, benzotriazolyl, indolyl, halonitrophenyl, halopyrimidinyl, halopuriny, C_{1-3} alkyl-nitroaminopyrimidinyl, triazolopyrimidinyl, pyridyl, 1H-indazol-5-yl, phenyl or
- 20 benzdioxolanyl.
- According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q' and wherein said compounds have an absolute configuration of R.
- 25 According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q' and wherein said compounds have an absolute configuration of S.
- According to another embodiment of the first aspect of the present invention
- 30 are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and wherein said compounds have an absolute configuration of R.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein Q is Q" and wherein said compounds have an absolute configuration of S.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein m and n are each 1.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein D is O.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein A is C.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein A is CH.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein A is N.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein E is N.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein E is CH.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein E is C.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the

present invention wherein said compounds exhibit as described herein a CGRP Binding IC_{50} of less than 10 nM.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein said compounds exhibit as described herein a CGRP Binding IC_{50} of less than 100 nM.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein said compounds exhibit as described herein a CGRP Binding IC_{50} of less than 1000 nM.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 1; and G, J and E together form A^x or A^y .

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 1; and G, J and E together form A^x .

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 1; and G, J and E together form A^y .

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein A^x is a fused heterocycle having two fused rings with 5 to 7 members in each of said rings, said heterocycle containing one to four of the same or different heteroatoms selected from the group consisting of O, N and S; and optionally containing 1 or 2 carbonyls wherein the carbon atom of said carbonyl is a member of said fused heterocycle.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein A^x is a fused heterocycle having two fused rings with 5 to 7 members in each of said rings, said heterocycle containing one to four of the same or different heteroatoms selected from the group consisting of O, N and S.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein A^x is a fused heterocycle having two fused rings with 5 to 7 members in each of said rings, said heterocycle containing one to four of the same or different heteroatoms selected from the group consisting of O, N and S and wherein A^x is substituted with phenyl.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein A^x is a fused heterocycle described herein.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein A^y is a 4 to 6 membered heterocycle containing one to three heteroatoms selected from the group consisting of O, N and S; and optionally containing 1 to 2 carbonyls, wherein the carbon atom of said carbonyl is a member of said 4 to 6 membered heterocycle.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein A^y is a 4 to 6 membered heterocycle containing one to three heteroatoms selected from the group consisting of O, N and S.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein A^y is a 4 to 6 membered heterocycle containing one to three heteroatoms selected from the group consisting of O, N and S; and optionally containing 1 to 2 carbonyls, wherein the carbon atom of said carbonyl is a member of said 4 to 6 membered heterocycle; and wherein A^y is substituted with phenyl.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein A^y is a 4 to 6 membered heterocycle described herein.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 0 such that G and J are each attached to A, then G, J

and A together form a spirocyclic ring system with said rings of said system containing A and wherein G, J and A together are GJA' or GJA".

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 0 such that G and J are each attached to A, then G, J and A together form a spirocyclic ring system with said rings of said system containing A and wherein G, J and A together are GJA'.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 0 such that G and J are each attached to A, then G, J and A together form a spirocyclic ring system with said rings of said system containing A and wherein G, J and A together are GJA".

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 0 such that G and J are each attached to A, then G, J and A together form a spirocyclic ring system with said rings of said system containing A and wherein G, J and A together are GJA' and GJA' is A^x.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 0 such that G and J are each attached to A, then G, J and A together form a spirocyclic ring system with said rings of said system containing A and wherein G, J and A together are GJA' and GJA' is A^y.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 0 such that G and J are each attached to A, then G, J and A together form a spirocyclic ring system with said rings of said system containing A and wherein G, J and A together are GJA" and GJA" is A^x.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 0 such that G and J are each attached to A, then G, J and A together form a spirocyclic ring system with said rings of said system containing A and wherein G, J and A together are GJA" and GJA" is A^y.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 0 such that G and J are each attached to A, then G, J and A together form a spirocyclic ring system with said rings of said system containing A and wherein G, J and A together are form a heterocycle selected from the group consisting of imidazolinonyl, imidazolidinonyl, dihydroquinolinonyl, dihydroisoquinolinonyl, dihydroquinazolinonyl, dihydroquinoxalinonyl, dihydrobenzoxazinyl, hydrobenzoxazinyl, dihydrobenzoxazinonyl, dihydrobenzimidazolonyl, dihydrobenzimidazolyl, dihydro-benzthiazolonyl, dihydrobenzthiazolyl, dihydrobenzothiophenonyl, dihydrobenzofuranonyl, dihydroindolonyl, indoliny, pyrazolinyl, pyrazolidinyl, pyrrolinyl, pyrrolidinyl, imidazolinyl, imidazolidinyl, piperidiny, piperazinyl and morpholino; wherein said heterocycle is optionally substituted with C_{1-4} alkyl, C_{1-4} alkoxy, C_{1-4} haloalkyl, cyano, C_{3-7} cycloalkyl, phenyl, halophenyl, furanyl, pyrrolyl, pyrrolinyl, pyrrolidinyl, imidazolyl, imidazolinyl, imidazolidinyl, pyrazolyl, pyrazolinyl, pyrazolidinyl, pyridyl, pyrimidinyl, piperidiny, piperazinyl or morpholino.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 0 such that G and J are each attached to A, then G, J and A together form a spirocyclic ring system with said rings of said system containing A and wherein G, J and A together are form a heterocycle selected from the group consisting of imidazolinonyl, imidazolidinonyl, dihydroquinolinonyl, dihydroisoquinolinonyl, dihydroquinazolinonyl, dihydroquinoxalinonyl, dihydrobenzoxazinyl, hydrobenzoxazinyl, dihydrobenzoxazinonyl, dihydrobenzimidazolonyl, dihydrobenzimidazolyl, dihydro-benzthiazolonyl, dihydrobenzthiazolyl, dihydrobenzothiophenonyl, dihydrobenzofuranonyl, dihydroindolonyl, indoliny, pyrazolinyl, pyrazolidinyl, pyrrolinyl, pyrrolidinyl, imidazolinyl, imidazolidinyl, piperidiny, piperazinyl and morpholino; wherein said heterocycle is optionally substituted with C_{1-4} alkyl, C_{1-4} alkoxy, C_{1-4} haloalkyl, cyano, C_{3-7} cycloalkyl, phenyl, halophenyl, furanyl, pyrazolyl, pyrazolinyl, pyrazolidinyl, pyridyl, pyrimidinyl, piperidiny, piperazinyl or morpholino.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 0 such that G and J are each attached to A, then G, J and A together form a spirocyclic ring system with said rings of said system containing A and wherein G, J and A together are form a heterocycle selected from the group consisting of imidazolinonyl, imidazolidinonyl, dihydroquinolinonyl, dihydroisoquinolinonyl, dihydroquinazolinonyl, dihydrobenzofuranonyl, dihydroindolonyl, indoliny, pyrazolinyl, pyrazolidinyl, pyrrolinyl, pyrrolidinyl, imidazoliny, imidazolidinyl, piperidinyl, piperazinyl and morpholino; wherein said heterocycle is optionally substituted with C_{1-4} alkyl, C_{1-4} alkoxy, C_{1-4} haloalkyl, cyano, C_{3-7} cycloalkyl, phenyl, halophenyl, piperazinyl or morpholino.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 0 such that G and J are each attached to A, then G, J and A together form a spirocyclic ring system with said rings of said system containing A and wherein G, J and A together are form a heterocycle selected from the group consisting of imidazolinonyl, imidazolidinonyl, dihydroquinolinonyl, dihydroisoquinolinonyl, dihydroquinazolinonyl, dihydroquinoxalinonyl, dihydrobenzoxazinyl, hydrobenzoxazinyl, dihydrobenzoxazinonyl, dihydrobenzimidazolonyl, dihydrobenzimidazolyl, dihydro-benzthiazolonyl, dihydrobenzthiazolyl, dihydrobenzothiophenonyl, dihydrobenzofuranonyl, dihydroindolonyl, indoliny, pyrazolinyl, pyrazolidinyl, pyrrolinyl, pyrrolidinyl, imidazoliny, imidazolidinyl, piperidinyl, piperazinyl and morpholino.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 0 such that G and J are each attached to A, then G, J and A together form a spirocyclic ring system with said rings of said system containing A and wherein G, J and A together are form a heterocycle selected from the group consisting of imidazolinonyl, imidazolidinonyl, dihydroquinolinonyl, dihydroisoquinolinonyl, dihydroquinazolinonyl, dihydroquinoxalinonyl, dihydrobenzoxazinyl, hydrobenzoxazinyl and dihydrobenzoxazinonyl.

According to another embodiment of the first aspect of the present invention are provided compounds according to the first embodiment of the first aspect of the present invention wherein p is 0 such that G and J are each attached to A, then G, J and A together form a spirocyclic ring system with said rings of said system
5 containing A and wherein G, J and A together are form a heterocycle selected from the group consisting of imidazolinonyl, imidazolidinonyl, dihydroquinolinonyl, dihydroisoquinolinonyl, dihydroquinazolinonyl, dihydroquinoxalinonyl and dihydrobenzoxazinyl.

10 According to various embodiments of a second aspect of the present invention are provided pharmaceutical compositions comprising compounds of Formula (I) as defined herein.

According to various embodiments of a third aspect of the present invention are provided methods of treating inflammation (particularly neurogenic
15 inflammation), headache (particularly migraine), pain, thermal injury, circulatory shock, diabetes, Reynaud's syndrome, peripheral arterial insufficiency, subarachnoid/ cranial hemorrhage, tumor growth, flushing associated with menopause and other conditions the treatment of which can be effected by the antagonism of the CGRP receptor by the administration of pharmaceutical compositions comprising
20 compounds of Formula (I) as defined herein.

According to various embodiments of a fourth aspect of the present invention are uses of the compounds of the present invention selected from the group consisting of (a) immune regulation in gut mucosa (b) protective effect against cardiac anaphylactic injury (c) stimulating or preventing interleukin-1b(IL-1b)-stimulation of

- 30 According to various embodiments of a fifth aspect of the present invention are provided combinations of the compounds of the present invention with one or more agents selected from the group consisting of COX-2 inhibitors, NSAIDS,

aspirin, acetaminophen, triptans, ergotamine and caffeine for the treatment of migraine.

According to a sixth aspect of the present invention are provided in vivo non-terminal methods of identifying anti-migraine compounds.

5 According to the first embodiment of the sixth aspect of the present invention is provided an in vivo non-terminal method of identifying anti-migraine compounds comprising administering a CGRP-receptor agonist to a mammal in an amount capable of inducing an increase in blood flow, followed by administering a test compound in an amount capable of reversing said CGRP-induced increase in blood
10 flow, wherein said mammal is a transgenic mammal with humanized RAMP1 having Trp74 or a mammal endogenously expressing RAMP1 having Trp74.

 According to another embodiment of the sixth aspect of the present invention is provided an in vivo non-terminal method of identifying anti-migraine compounds comprising administering to a mammal a test compound prior to the delivery of a
15 CGRP-receptor agonist wherein said CGRP-receptor agonist is administered in an amount capable of inducing an increase in blood flow and wherein said test compound is administered in an amount capable of suppressing said CGRP-induced increase in blood flow, wherein said mammal is a transgenic mammal with humanized RAMP1 having Trp74 or a mammal endogenously expressing RAMP1
20 having Trp74.

 According to another embodiment of the sixth aspect of the present invention is provided an in vivo non-terminal method of identifying anti-migraine compounds comprising administering to a mammal a CGRP-receptor agonist in an amount capable of inducing an increase in peripheral artery diameter, followed by
25 administering a test compound in an amount capable of reversing said CGRP-induced increase in peripheral artery diameter, wherein said mammal is a transgenic mammal with humanized RAMP1 having Trp74 or a mammal endogenously expressing RAMP1 having Trp74.

 According to another embodiment of the sixth aspect of the present invention
30 is provided an in vivo non-terminal method of identifying anti-migraine compounds comprising administering to a mammal a test compound prior to the delivery of a CGRP-receptor agonist wherein said CGRP-receptor agonist is administered in an

amount capable of inducing an increase in peripheral artery diameter and wherein said test compound is administered in an amount capable of suppressing said CGRP-induced increase in peripheral artery diameter, wherein said mammal is a transgenic mammal with humanized RAMP1 having Trp74 or a mammal endogenously
5 expressing RAMP1 having Trp74.

According to other embodiments of the sixth aspect of the present invention are provided in vivo non-terminal methods of identifying anti-migraine compounds as described herein wherein said blood flow is facial blood flow.

According to other embodiments of the sixth aspect of the present invention
10 are provided in vivo non-terminal methods of identifying anti-migraine compounds as described herein wherein said mammal endogenously expressing RAMP1 having Trp74 is a non-human primate.

According to other embodiments of the sixth aspect of the present invention are provided in vivo non-terminal methods of identifying anti-migraine compounds
15 as described herein wherein said mammal endogenously expressing RAMP1 having Trp74 is man.

According to other embodiments of the sixth aspect of the present invention are provided in vivo non-terminal methods of identifying anti-migraine compounds as described herein wherein said mammal endogenously expressing RAMP1 having
20 Trp74 is a non-human primate and said non-human primate is a marmoset.

According to other embodiments of the sixth aspect of the present invention are provided in vivo non-terminal methods of identifying anti-migraine compounds as described herein wherein said anti-migraine compounds are CGRP-receptor antagonists.

25 Other embodiments of the present invention may comprise a suitable combination of two or more of the embodiments and/or aspects disclosed herein.

Yet other embodiments of the present invention may comprise a suitable subset of an embodiment and/or aspect disclosed herein.

Still yet other embodiments and aspects of the invention will be apparent
30 according to the description provided below.

Brief Description of the Figures

Figure 1. Schild Analysis.

Dose response of CGRP stimulated cAMP production in the absence (filled squares) and presence (all others) of increasing concentrations (left-to-right) of the CGRP antagonist Example 2. Inset is Schild plot of log dose ratio minus 1 (Y-axis) against
5 log concentration of the antagonist Example 2 (X-axis): Slope = 0.94, $K_b = 0.16$ nM.

Figure 2. Direct Validation of Facial Blood Flow as Surrogate for Intracranial Artery Dilation in the Rat.

Intravenous delivery of i.v. h α CGRP induces comparable percent increases (100-
10 120% of baseline) in rat middle meningeal artery diameter and rat facial blood flow (left and right striped bars, respectively). Pretreatment with the peptide antagonist CGRP(8-37) produces a 50% inhibition of subsequent i.v. h α CGRP administration for both measures (filled bars). Intracranial artery diameter and facial blood flow were measured concurrently in each animal (n = 5 rats). Data are mean \pm sem * p <
15 0.05, ** p < 0.01 vs corresponding h α CGRP alone.

Figure 3. Dose-Response for h α CGRP in Non-Human-Primate Laser Doppler Facial Blood Flow.

Delivery of h α CGRP induces dose-dependent increase in laser Doppler facial blood
20 flow in non-human primates (e.g., common marmoset). Animals (n= 6) received increasing doses of h α CGRP at 30 min intervals. Data are peak % change from baseline \pm sem, with each animal serving as its own control.

Figure 4. Inhibition of CGRP-Induced Changes in Non-Human Primate Facial
25 Blood Flow.

The novel CGRP antagonist Example 2 (filled bars) delivered prior to h α CGRP (striped bar), dose-dependently inhibits the CGRP-induced increase in laser Doppler facial blood flow. Vehicle (open bar) was without effect. Data are mean \pm sem (n =
30 5-6 primates per group). *p < 0.05 compared CGRP alone.

Figure 5. Effect of CGRP Antagonist on Non-Human Primate Blood Pressure.

In contrast to the dose-dependent inhibition of primate facial blood flow (see Figure 4.), Example 2 has negligible effect on blood pressure (parallel studies in separate animals, n=6). Animals received repeat doses of Example 2 at 20 min intervals. BP data are mean \pm sem over 20 min period measured by arm cuff

Detailed Description of the Invention

The description of the invention herein should be construed in congruity with the laws and principals of chemical bonding. For example, it may be necessary to remove a hydrogen atom in order accommodate a substituent at any given location.

10 As used herein, "heterocyclic" or "heterocycle" includes cyclic moieties containing one or more heteroatoms, (*e.g.*, O, N or S) said heterocycles include those that are aromatic and those that are not, *i.e.*, "alicyclic", unless otherwise specified.

As used herein, the term "fused bicyclic system" when describing for example a 5.6-fused bicyclic system containing 1 to 4 nitrogen atoms includes aromatic and
15 alicyclic systems, *e.g.* indolizine, indole, isoindole, 3H-indole, indoline, indazole or benzimidazole.

If a substituent is named generically, then any and all species of that genus comprise that aspect of the invention. For example, a substituent generically named as "pyrrolonyl" (the radical of "pyrrolone", a pyrrole having a carbonyl) includes
20 pyrrol-2-onyls wherein the carbonyl is adjacent to the nitrogen and pyrrol-3-onyls wherein the carbonyl and nitrogen have an intervening methylene.

Similarly, the present invention comprises that a substituent may be attached at any and all suitable points of attachment on said substituent unless otherwise specified.

25 However, it is also understood that the compounds encompassed by the present invention are those that are chemically stable, *i.e.*, heteroalicyclic substituents of the present invention should not be attached in such a way that a heteroatom in said heteroalicyclic substituent is alpha to a point of attachment wherein said point of attachment is also a heteroatom.

30 An embodiment or aspect which depends from another embodiment or aspect, will describe only the variables having values or provisos that differ from the embodiment or aspect from which it depends. If for example a dependent

-45-

embodiment only addresses R^2 , then the variables and provisos not related to R^2 should reflect that of the embodiment from which it depends.

If a variable is quantified with a value of zero, then a bond attaching said variable should no longer be represented.

5 As used herein, "alkylene" means a divalent alkane, *i.e.*, an alkane having two hydrogen atoms removed from said alkane (said hydrogen removed from two different carbon atoms when said alkane contains more than one carbon atom), *e.g.*, -CH₂CH₂CH₂-.

10 As used herein, "alkylidene" means an alkane having two hydrogen atoms removed from one carbon atom in said alkane, *e.g.*,

It should be understood that the alternating double bond designations in the six-membered ring of the 5,6-membered fused structure represented in Formula (I) are relative and represent the delocalized π orbital electrons of said ring.

15 As used herein, "aryl" or "ar-" includes phenyl or naphthyl.

As used herein, "heterocyclic" or "heterocyclo" includes both heteroaryl and heteroalicyclic.

20 As used herein, "halo" or "halogen" includes fluoro, chloro, bromo and iodo and further means one or more of the same or different halogens may be substituted on a respective moiety.

Unless specified otherwise, acyclic hydrocarbons such as alkyl, alkoxy, alkenyl and alkynyl may be branched or straight chained.

25 It is to be understood that the present invention may include any and all possible stereoisomers, geometric isomers, diastereoisomers, enantiomers, anomers and optical isomers, unless a particular description specifies otherwise.

As used herein, "Trp74", means that the 74th residue in RAMP1 is tryptophan (Mallee et al. *J Biol Chem* 2002, 277, 14294-8) incorporated by reference herein.

30 As used herein "anti-migraine compound" includes any compound, peptide or peptide fragment (modified or unmodified) capable of reversing or attenuating CGRP-receptor mediated vasodilation, (*e.g.*, CGRP-receptor antagonists).

As used herein "test compound" includes any compound, peptide or peptide fragment (modified or unmodified) being tested to determine if it is capable of reversing or attenuating CGRP-receptor mediated vasodilation, (*e.g.*, putative CGRP-receptor antagonists).

5 As used herein, "CGRP-receptor agonist" includes any compound, peptide or peptide fragment (modified or unmodified) capable of inducing CGRP-receptor mediated vasodilation particularly by example α CGRP or β CGRP; other members of the calcitonin family, *e.g.*, adrenomedullin; N-terminal CGRP fragments, *e.g.*, CGRP(1-12) CGRP(1-15) and CGRP(1-22); C-terminal amide (NH₂) versions of
10 CGRP *e.g.*, CGRP(1-8+NH₂), CGRP(1-13+NH₂) or CGRP(1-14+NH₂); and non-naturally occurring CGRP analogues *e.g.*, [Ala¹ ψ (CH₂NH)Cys²]hCGRP which contains a pseudopeptide bond between Ala¹ and Cys². *See* Maggi CA, Rovero P, Giuliani S, Evangelista S, Regoli D, Meli A. The compounds of this invention may exist in the form of pharmaceutically acceptable salts. Such salts may include addition salts with inorganic acids such as,
25 for example, hydrochloric acid and sulfuric acid, and with organic acids such as, for example, acetic acid, citric acid, methanesulfonic acid, toluenesulfonic acid, tartaric acid and maleic acid. Further, in case the compounds of this invention contain an acidic group, the acidic group may exist in the form of alkali metal salts such as, for example, a potassium salt and a sodium salt; alkaline earth metal salts such as, for
30 example, a magnesium salt and a calcium salt; and salts with organic bases such as a triethylammonium salt and an arginine salt. In the case of a sublingual formulation a

saccharin salt or maleate salt may be of particular benefit. The compounds of the present invention may be hydrated or non-hydrated.

The compounds of this invention can be administered in such oral dosage forms as tablets, capsules (each of which includes sustained release or timed release formulations), pills, powders, granules, elixirs, tinctures, suspensions, syrups and emulsions. The compounds of this invention may also be administered intravenously, intraperitoneally, subcutaneously, or intramuscularly, all using dosage forms well known to those skilled in the pharmaceutical arts. The compounds can be administered alone, but generally will be administered with a pharmaceutical carrier selected upon the basis of the chosen route of administration and standard pharmaceutical practice. Compounds of this invention can also be administered in intranasal form by topical use of suitable intranasal vehicles, or by transdermal routes, using transdermal skin patches. When compounds of this invention are administered transdermally the dosage will be continuous throughout the dosage regimen.

While dosing from 0.01 mg/kg to 30 mg/kg is envisaged for compounds of the present invention, the dosage and dosage regimen and scheduling of a compounds of the present invention must in each case be carefully adjusted, utilizing sound professional judgment and considering the age, weight and condition of the recipient, the route of administration and the nature and extent of the disease condition. In accordance with good clinical practice, it is preferred to administer the instant compounds at a concentration level which will produce effective beneficial effects without causing any harmful or untoward side effects.

Synthesis

Compounds of the present invention may be synthesized according to the general schemas provided below. Variables provided in the schema below are defined in accordance with the description of compounds of the above Formula unless otherwise specified. The compounds of the present invention may be prepared according to Scheme 1 or Scheme 2. It may also be possible to use variations of said schemes to prepare the compounds of the present inventions, said variations known to those of ordinary skill in the art.

Scheme 1. Synthesis of Formula I Compounds

5

The synthesis described in Scheme 1 begins with a compound of Formula II, which is an amino acid with a protected amino terminus. Common amino protecting groups (PG) include BOC, CBZ, and Fmoc and their addition and removal are well known in the field. The carboxylic acid moiety of a Formula II compound is coupled with an amine of formula HNR^1R^2 using standard peptide coupling reagents to form an amide of Formula III. The amino protecting group is removed resulting in a Formula IV compound. This compound is then coupled with an amine of Formula V (see below) in a mixed urea or urea isostere reaction, generating a Formula I compound. Mixed urea formation is conveniently carried using phosgene, disuccinimidyl carbonate, carbonyl diimidazole or other equivalents. Formation of urea isosteres, such as cyanoguanidines and sulfonylguanidines, are known in the literature.

15

Scheme 2. Synthesis of Formula I Compounds

20

-49-

The synthesis described by Scheme 2 begins with a compound of Formula V, which is an amino acid with a protected carboxylate terminus. The protection is generally a methyl ester, but other protecting groups such as ethyl, t-butyl, and benzyl esters may also be used. The Formula V compound is coupled with an amine of Formula VIII (see below) in a mixed urea or urea isostere reaction, as above, to generate a Formula VI compound. The Formula VI compound is converted to a free acid compound of Formula VII which is then coupled with an amine of Formula HNR^1R^2 to generate a Formula I compound.

Scheme 3. Synthesis of Formula I Compounds

The synthesis described by Scheme 3 begins with a compound of Formula VII from Scheme 2. The Formula V compound is coupled with an alcohol, $\text{R}^4\text{-OH}$. Such ester-forming reactions are well known in the art and can be carried out, for example, with carbodiimide coupling agents such as N,N-dicyclohexylcarbodiimide. In addition, it is often advantageous, especially for esters of secondary and tertiary alcohols, to include additives that accelerate acylations such as 4-dimethylaminopyridine.

-50-

Preparation of HNR^1R^2 and Formula VIII amines

Formula VIII and HNR^1R^2 amines are commercially available, made by literature methods or described herein.

5

Preparation of Formula II and Formula V amino acids

Formula II and Formula V amino acids may be commercially available or made as described in Scheme 4.

10

Scheme 4. Synthesis of Formula II and Formula V Compounds

The synthesis described in Scheme 4 begins with an aldehyde of Formula IX, which is reacted with a glycine phosphonate of Formula X in a Wadsworth-Emmons coupling reaction. The compound of Formula X is deprotonated with a base such as diazabicycloundecene or tetramethylguanidine or other organic or inorganic bases well known in the art. The double bond of the resulting Formula XI compound is reduced to give compounds of Formula XII. Reduction can be carried out to give either a racemate or by use of a stereoselective catalyst to give either enantiomer of Formula XII. Such reductions can result from transfer hydrogenation from hydrogen donors such as formic acid or cyclohexadiene, or hydrogenation using gaseous hydrogen, both in the presence of a suitable catalyst. Compounds of Formula II are prepared by acid or base hydrolysis of the ester. Compounds of Formula V are prepared by removal of the protecting group (PG) using methods well known in the art.

Other amino acid derivatives of Formula XII may be prepared as shown in Scheme 5.

Scheme 5. Synthesis of Formula XII

Where, for the purposes of Scheme 5, compounds of Formula XIV are nucleophilic compounds such as amines or alcohols that are able to participate in a Michael Reaction with a compound of Formula XIII as shown.

10 Other compounds of Formula I may be prepared according to Scheme 6 or Scheme 7. It may also be possible to use variations of said schemes to prepare the compounds of the present inventions, said variations known to those of ordinary skill in the art.

Scheme 6. Synthesis of Formula I Compounds

The synthesis described in Scheme 6 begins with commercially available or synthesized aldehydes. The two-carbon homologation and double-bond reduction which are well-known in the literature and lead to compounds of Formula XV. Some
 5 Formula XV compounds are also commercially available and others may be prepared by other methods well known in the art. Preparation of compounds of Formula XVI and XVII are known in the literature as substrates and products of the Evans chiral asymmetric synthesis. Hydrolysis leads to compounds of Formula XVIII. As with
 10 compounds of Formula VII in Scheme 2, these carboxylic acids can react with amines of formula R^1R^2NH to afford compounds of Formula XIX using well known amide coupling protocols. Hydrolysis of the *tert*-butyl ester leads to compounds of Formula XX, which can be further coupled with compounds of Formula VIII to afford Formula I compounds.

Scheme 7. Synthesis of Formula I Compounds

Scheme 7 also starts with commercially available or synthesized aldehydes.

- 5 These are reacted with dimethyl succinate in the presence of bases to give compounds of Formula XXI. The double bond of the Formula XXI compound is reduced to give compounds of Formula XXII. Reduction can be carried out to give either a racemate or by use of a stereoselective catalyst to give either enantiomer of Formula XXII. Such reductions can result from transfer hydrogenation from
- 10 hydrogen donors such as formic acid or cyclohexadiene, or hydrogenation using gaseous hydrogen, both in the presence of a suitable catalyst. Amide coupling with amines of Formula VIII lead to compounds of Formula XXIII using well known amide synthesis protocols. Hydrolysis of methyl ester leads to Formula XXIV compounds, which are further coupled with various amines or alcohols to give
- 15 amides of Formula I and esters of Formula I, respectively.

Compounds of Formula I may also be prepared according to Scheme 8.

Scheme 8. Synthesis of Formula I Compounds

- 5 The synthesis described in Scheme 8 begins with a commercially available N-*tert*-butyloxycarbonyl-L-aspartic acid benzyl ester. Differently protected aspartic acid derivatives may also be used for synthetic convenience. The beta carboxyl group is coupled with amines of Formula VIII using standard peptide coupling protocols. The alpha-carboxyl protecting group of the Formula XXV compound is removed by
- 10 hydrogenolysis giving compounds of Formula XXVI. These are further coupled with amines of the formula HNR^1R^2 to give compounds of formula XXVII. The amino protecting group is removed by treatment with strong acids such as trifluoroacetic acid or hydrogen chloride in organic solvents. The resulting compounds of Formula XXVIII are then reacted with a variety of electrophilic reagents to generate Formula I
- 15 compounds. For example, they can be coupled with halo-aromatic compounds using known methods involving heating at various temperatures or by catalysis with transition metals such as palladium or copper, either in stoichiometric amounts or as catalysts. They can also react with various aldehydes or ketones under reductive alkylation conditions, well described in the art. They can also react with isocyanates,

acyl chlorides, or carbamoyl chlorides to generate urea, amide or carbamate derivatives, respectively. It is understood that the sequence of the modifications described above can be changed depending on the selection of protecting groups and the order of their removal.

5

Compounds of Formula I may also be prepared according to Scheme 9.

Scheme 9. Synthesis of Formula I Compounds

10

The synthesis described in Scheme 9 begins with an imine of Formula XXIX, prepared by condensation of ethyl glyoxalate and amines of formula R^3-NH_2 . These are reacted with 2-*tert*-butoxy-2-oxoethylzinc chloride to give compounds of Formula XXX. Treatment with strong acids removes the *tert*-butyl ester protecting group to give free acids of Formula XXXI which are coupled to amines of Formula VIII to yield compounds of Formula XXXII. The ethyl ester is hydrolyzed with a metal hydroxide salt or aqueous base to give free alpha-acids of Formula XXXIII. These, in turn, are coupled with amines of the formula HNR^1R^2 to give compounds of formula I.

Ureidoamide Intermediates and Examples

General. ^1H - and ^{13}C -NMR spectra were run on a Bruker 500 or 300 MHz instrument and chemical shifts were reported in ppm (δ) with reference to tetramethylsilane ($\delta = 0.0$). All evaporations were carried out under reduced pressure. Unless otherwise stated, LC/MS analyses were carried out on a Shimadzu instrument using a YMC C18 column (3 x 50 mm) employing a 2 min linear gradient of 0% to 100% solvent B in A in a 3 min run. For LC/MS and for Shimadzu Preparative HPLC system, Solvent A was: 10% methanol/90% water/0.1% trifluoroacetic acid, and solvent B was 90% methanol/10% water/0.1% trifluoroacetic acid with a UV detector set at 220 nm.

1-Benzyl-2',3'-dihydro-2'-oxospiro-[piperidine-4,4'(1'H)-quinazoline

Polyphosphoric acid (113 g) was heated to 100-110°C and stirred while 1-benzyl-piperidin-4-one (9.27 ml, 50 mmol) was added. Immediately afterwards, phenyl urea (9.55 g, 70. mmol) was added in portions small enough to avoid excessive foaming. The mixture was heated at 150-160°C overnight. Water (200 mL) was then added slowly to the mixture which had been allowed to cool to 100-110°C (at lower temperatures the mixture becomes too viscous to stir). The resulting solution was neutralized with 10N NaOH to ca. pH 8, and then extracted with chloroform. The organic phase was dried over magnesium sulfate and then concentrated to give the crude product which was purified by flash column chromatography on silica gel (6:4 ethyl acetate/hexanes) to give the desired product (9.0 g, 58%). Mass spec.: 308.25 (MH)⁺.

-58-

2',3'-dihydro-2'-oxospiro-[piperidine-4,4'(1'H)-quinazoline

To a solution of 1-benzyl-2',3'-dihydro-2'-oxospiro-[piperidine-4,4'(1'H)-quinazoline (1.00 g) in degassed methanol (50 ml) and 6N hydrochloric acid (2.0 ml) was added 10% palladized charcoal (150 mg). The mixture was shaken on a Parr apparatus under an atmosphere of hydrogen at 60 psi overnight. LC/MS showed incomplete reaction. More 10% palladized charcoal (200 mg) was added, and the mixture was shaken for 2 more days. At that point, all starting material was consumed. The mixture was filtered and the filtrate concentrated to give 531 mg of the desired compound (64%). Mass spec.: 218.12 (MH)⁺.

4-Amino-4-cyano-piperidine-1-carboxylic acid *tert*-butyl ester

To a well stirred solution of 4-oxo-piperidine-1-carboxylic acid *tert*-butyl ester (9.0 g, 45.3 mmol) in methanol was added ammonium chloride (2.66 g, 49.8 mmol) at room temperature and stirred for 1 h. Sodium cyanide (2.44 g, 49.8 mmol) was added and stirring was continued for additional 16 h. The reaction mixture was quenched with 5% aqueous sodium hydrogencarbonate (50 mL), diluted with water, and the methanol removed by rotary evaporation. The cyanoamine was extracted with methylene chloride (3x 100 mL), dried over sodium sulfate, and the solvents evaporated to give the desired compound as an oil in 91% yield. ¹H-NMR (300 MHz, CDCl₃): δ 3.95 - 3.90 (m, 1 H), 3.80 - 3.71 (m, 1 H), 3.42 - 3.06 (m, 2 H), 2.04 - 1.94 (m, 1 H), 1.71 - 1.50 (m, 3 H). Mass spec.: 226 (MH)⁺.

-59-

2-Phenyl-1,3,8-triaza-spiro[4.5]dec-1-en-4-one, hydrochloride

To a solution of 4-amino-4-cyano-piperidine-1-carboxylic acid *tert*-butyl ester (1.0 g, 4.44 mmol) in methylene chloride (30 mL) was added triethylamine (1.24 mL, 8.88 mol), followed by benzoyl chloride (936 mg, 6.66 mmol). After 30 min, 4-(dimethylamino)pyridine (40 mg, 0.33 mmol) was added and stirring continued for additional 12 h. The reaction mixture was then quenched with 1M sodium hydroxide (10 mL), diluted with ethyl acetate (100 mL), and separated. The organic layer was washed sequentially with 1M sodium hydroxide (40 mL), aqueous sodium hydrogencarbonate (50 mL), and brine (50 mL) then dried over sodium sulfate. The desired product, 4-benzoylamino-4-cyano-piperidine-1-carboxylic acid *tert*-butyl ester was obtained in 90% yield through crystallization using 30% ethyl acetate in hexane as a solvent.

To a solution of 4-benzoylamino-4-cyano-piperidine-1-carboxylic acid *tert*-butyl ester (1.3 g, 4 mmol) in ethanol (10 mL) was added 6M sodium hydroxide (1.5 mL) followed by 30% hydrogen peroxide. The reaction mixture was then refluxed for 3 h. The reaction mixture was then diluted with water (30 mL), and the ethanol removed. The residue was diluted with ethyl acetate (100 mL). The organic phase was washed with brine (30 mL) and dried over sodium sulfate. The desired product, 4-oxo-2-phenyl-1,3,8-triaza-spiro[4.5]dec-1-ene-8-carboxylic acid *tert*-butyl ester was obtained in 80% yield through crystallization from 30% ethyl acetate in hexane. The *tert*-butyl ester was then dissolved in methylene chloride (5 mL) and a saturated solution of hydrogen chloride in dioxane (25 mL) was added. After 2 h, the solvent was removed to give 2-phenyl-1,3,8-triaza-spiro[4.5]dec-1-en-4-one, hydrochloride as white powder in 95% yield. ¹H-NMR (500 MHz, CD₃OD): δ 8.23 - 8.21 (m, 2 H), 7.96 - 7.92 (m, 1 H), 7.79 - 7.76 (m, 2 H), 3.68 - 3.64 (m, 3 H), 3.31 - 3.30 (m, 1 H), 2.47 - 2.44 (m, 4 H). Mass spec.: 230 (MH)⁺.

-60-

5-Formyl-indazole-1-carboxylic acid *tert*-butyl ester

A methylene chloride (2 mL) solution of di-*tert*-butyldicarbonate (388 mg, 1.78 mmol) was added dropwise at room temperature to a solution of 1*H*-indazole-5-carbaldehyde (273 mg, 1.87 mmol), 4-dimethylaminopyridine (114 mg, 0.94 mmol), and triethylamine (0.26 mL, 1.87 mmol) in methylene chloride (10 mL). The resulting bright yellow solution was stirred at room temperature for 16 h. Solvents were removed *in vacuo* and the residue was subjected to flash chromatography with silica gel (25 g) and ethyl acetate/hexanes (1:1) containing 1% triethylamine as eluent to afford the title compound as a brownish yellow liquid (414 mg, 90%). ¹H-NMR (CDCl₃, 500 MHz) δ 10.08 (s, 1H), 8.38 (s, 1H), 8.34 (s, 1H), 8.25 (d, J = 8.5 Hz, 1H), 8.04 (d, J = 8.8 Hz, 1H), 1.71 (s, 9H). ¹³CNMR (CDCl₃, 125 MHz) δ 191.8, 149.0, 142.5, 140.6, 133.0, 128.3, 126.4, 125.8, 115.3, 85.7, 27.8.

15 5-(2-Benzyloxycarbonylamino-2-methoxycarbonyl-vinyl)-indazole-1-carboxylic acid *tert*-butyl ester

A solution of *N*-(benzyloxycarbonyl)-α-phosphonoglycine trimethyl ester (5.50 g, 16.6 mmol) and tetramethylguanidine (1.99 mL, 15.9 mmol) in anhydrous tetrahydrofuran (50 mL) was stirred at -78°C for 20 minutes. To this was added a solution of 5-formyl-indazole-1-carboxylic acid *tert*-butyl ester (3.72 g, 15.1 mmol) in tetrahydrofuran (25 mL) slowly via syringe over 10 minutes. The reaction mixture

-61-

was stirred at -78°C for 4 h and then allowed to warm to room temperature overnight. The solvent was evaporated and the resulting residue subjected to flash column chromatography on silica gel (1:2 ethyl acetate/hexane) giving the title compound as a white foam (5.77 g, 85%). ¹H-NMR (CDCl₃, 500 MHz) δ 8.09 (d, J = 9.0 Hz, 1H), 8.08 (s, 1H), 7.84 (s, 1H), 7.67 (d, J = 9.0 Hz, 1H), 7.47 (s, 1H), 7.30 (br s, 5H), 6.43 (br s, 1H), 5.09 (s, 2H), 3.84 (s, 3H), 1.72 (s, 9H). Mass spec.: 452 (MH)⁺.

(±)-5-(2-Amino-2-methoxycarbonyl-ethyl)-indazole-1-carboxylic acid *tert*-butyl ester

10 A mixture of 5-(2-benzyloxycarbonylamino-2-methoxycarbonyl-vinyl)-indazole-1-carboxylic acid *tert*-butyl ester (524 mg, 1.16 mmol) and 10% palladium on carbon (60 mg) in methanol (20 mL) was shaken for 4.5 h under 50 psi hydrogen gas using a Parr hydrogenator. The reaction mixture was evacuated and purged with nitrogen. Then, the reaction mixture was filtered through a pad of celite and the pad
15 was rinsed with several portions of methanol. 2-Trimethylsilanyl-ethanesulfonyl chloride

Sulfonyl chloride (43 mL, 539 mmol) was added in 3 min to a clear solution of triphenylphosphine (129 g, 490 mmol) in methylene chloride (200 mL) at 0°C in a flame-dried three-neck round bottom flask. After stirring at 0°C for 5 min, the ice-water bath was removed and sodium 2-trimethylsilyl-ethanesulfonate (50 g, 245 mmol) was added in portions over 10 min. The resulting white suspension was stirred at room temperature for 16 h, then it was filtered through a pad of celite. The filtrate was concentrated to ca 50 mL, ethyl acetate/hexanes (1:3, 1000 mL) and celite (40 g) were added. The mixture was stirred at room temperature for 15 min and

5 4-Bromo-2,6-dimethylphenyldiazo-t-butyl sulfide

4-Bromo-2,6-dimethylaniline (20.00 g, 100 mmol) was ground to a powder with a mortar and pestle and then suspended in 24% hydrochloric acid (41 mL). The stirred mixture was cooled to -20°C and treated with sodium nitrite (7.24 g, 1.05 equiv) in water (16 mL), dropwise over 40 min while the temperature was maintained below -5°C. After a further 30 min at -5°C to -20°C, the mixture was buffered to ca. pH 5 with solid sodium acetate. This mixture (kept at ca. -10°C) was added in portions to a stirred solution of t-butyl thiol (11.3 mL, 1 equiv) in ethanol (100 mL) at 0°C over ca. 10 min. Following addition, the mixture was stirred at 0°C for 30 min and then crushed ice (ca. 150 mL) was added. The mixture was stored in the refrigerator overnight. The resulting light-brown solid was collected by filtration, washed with water, and dried under high vacuum for several h. (26.90 g, 89%). The compound appeared to be stable as a solid but underwent significant decomposition when recrystallization from ethanol was attempted. ¹H-NMR (CDCl₃, 500 MHz) δ 1.58 (9H, s), 1.99 (6H, s), 7.21 (2H, s). Into a flame-dried round bottom flask, 4-bromo-2,6-dimethylphenyldiazo-t-butyl sulfide (12.50 g, 41.5 mmol) and potassium t-butoxide (46.56 g, 10 equiv) were combined. A stir bar was added and the mixture placed under nitrogen. To this was added dry DMSO (120 mL). The mixture was stirred vigorously overnight at rt. The reaction mixture was then carefully poured into a mixture of crushed ice (400 mL) and 10% hydrochloric acid (200 mL). The resulting suspension was left to stand at 4°C overnight and the solid was collected by filtration and washed with water. The crude solid was dissolved in 5:1 methylene chloride/methanol and the solution dried over magnesium sulfate and evaporated to give the product as an off-white solid (7.60 g, 87%). ¹H-NMR (CDCl₃/CD₃OD, 500 MHz) δ 2.51 (3H, s), 7.22 (1H, s), 7.69 (1H, s), 7.94 (1H, s). 7-methylindazole-5-carboxaldehyde

5-Bromo-7-methylindazole (6.10 g, 28.9 mmol) and sodium hydride (60% in mineral oil, 1.27 g, 1.1 equiv) were weighed into a flame-dried round-bottom flask containing a magnetic stir bar. Under a nitrogen atmosphere at room temperature, dry tetrahydrofuran (30 mL) was added. The mixture was stirred at room temperature for 15 min, during which time it became homogeneous. The stirred mixture was cooled to -70°C and a solution of *sec*-butyllithium in cyclohexane (1.4M, 45 mL, 2.2 equiv) was added over several minutes. After 1 h at -70°C, dimethylformamide (10 mL) was added over several minutes. The mixture was allowed to warm to room temperature and was stirred overnight. It was then cooled to 0°C and carefully treated with 1N hydrochloric acid (60 mL). After a few minutes, solid sodium bicarbonate was added to basify the mixture to pH 9-10. The layers were separated and the aqueous phase washed twice with ethyl acetate. The combined organic phases were extracted with 0.8M sodium hydrogen sulfate (3 x 125 mL). The combined aqueous phases were washed with ethyl acetate (100 mL) and then the pH was adjusted to ca. 10 with solid sodium hydroxide. The resulting

-97-

suspension was extracted with ethyl acetate (3 x 150 mL). The combined organic phases were washed with brine, dried (magnesium sulfate) and evaporated to give the product as a light-tan solid (3.01 g, 65%). ¹H-NMR (CDCl₃, 500 MHz) δ 2.63 (3H, s), 7.73 (1H, s), 8.12 (1H, s), 8.25 (1H, s), 10.03 (1H, s). 2-Benzyloxycarbonylamino-3-(7-methyl-1H-indazol-5-yl)-acrylic acid methyl ester

A stirred solution of N-benzyloxycarbonyl-α-phosphonoglycine trimethyl ester (5.51 g, 1.2 equiv.) in tetrahydrofuran (30 mL) at room temperature was treated with tetramethylguanidine (1.91 mL, 1.1 equiv). After 10 min, 7-methylindazole-5-carboxaldehyde (2.22 g, 13.86 mmol) in tetrahydrofuran (20 mL) was added. Disappearance of starting material was monitored by TLC and LC/MS. After 5 days at room temperature, the solvent was evaporated and the residue dissolved in ethyl acetate. The solution was washed with 2% phosphoric acid and brine, dried (magnesium sulfate) and evaporated. The residue was purified by flash chromatography on silica gel, eluting with 1) 1:1 and 2) 2:1 ethyl acetate/hexane, to give the product as a colorless foam (4.93 g, 97%). ¹H-NMR (CDCl₃, 500 MHz) δ 2.43 (3H, s), 3.80 (3H, s), 5.12 (2H, s), 6.66 (1H, s), 7.28 (5H, brs), 7.33 (1H, s), 7.47 (1H, s), 7.74 (1H, s), 7.96 (1H, s). General Experimental Procedure for the Preparation of Examples 40b-40k.

The appropriate aldehyde (0.04 mmol) was added to a solution of Example 39
 5 piperazine (0.02 mmol) in MeOH (2.0 mL) and the resulting solution was shaken at
 room temperature for 1 h. Sodium triacetoxyborohydride (0.2 mmol) was then added
 and the solution allowed stir overnight at room temperature. The solution was then
 filtered through a SCX cartridge and the cartridge washed with MeOH and an
 ammonia/MeOH solution. The ammonia/MeOH solution was concentrated *in vacuo*
 10 and the crude products were purified by preparative HPLC to afford the products
 listed in Table 1.

The resulting light-brown solid was collected by filtration, washed with water, and dried under high vacuum for several hours (4.60 g, 78%). Mass spec.: 323.03 (MH)⁺.

10 5-Bromo-7-chloroindazole

Into a flame-dried round bottom flask, 4-bromo-2-chloro-6-methylphenyldiazo-t-butyl sulfide (4.60 g, 14.4 mmol) and potassium t-butoxide (16.1 g, 10 equiv) were combined. A stir bar was added and the mixture placed under nitrogen. To this was added dry DMSO (50 mL). The mixture was stirred vigorously for 10 min at room temperature. The reaction mixture was then carefully poured into a mixture of crushed ice (150 mL) and 10% hydrochloric acid (74 mL). The resulting suspension was left to stand at 4°C overnight and the solid was collected by filtration and washed with water. The solid was collected and dried in vacuo to give 2.86 g (86%) as a beige solid. $^1\text{H-NMR}$ (CDCl_3 , 500 MHz) δ 7.52 (d, $J=1.5$, 1H), 7.82 (d, $J=1.5$, 1H), 8.08 (s, 1H). stir bar. Under a nitrogen atmosphere at room temperature, dry tetrahydrofuran (30 mL) was added. The mixture was stirred at room temperature for 15 min, during which time it became homogeneous. The stirred mixture was cooled to -78°C and a solution of *tert*-butyllithium in pentane (1.7 M, 10.5 mL, 2.0 equiv) was added over several minutes. After 30 min at -78°C , the reaction was gradually warmed to -50°C , kept there for 15 min, and re-cooled to -78°C . Dimethylformamide (2.8 mL) was slowly added and the mixture allowed to warm to -50°C . The solution was quickly transferred to a separatory funnel containing diethyl ether and water. The aqueous was made acidic by the addition of 1 M potassium hydrogen sulfate and neutralized by the addition of sodium bicarbonate. The aqueous was extracted with diethyl ether (3x) which was washed with water, then brine, dried over magnesium sulfate, and concentrated to give 1.7 g (100%) of nearly pure material. An analytically pure sample was obtained by recrystallization from hot methanol. ^1H -NMR (CDCl_3 , 500 MHz) δ 7.97 (s, 1H), 8.20 (s, 1H), 8.30 (s, 1H), 10.02 (s, 1H). Mass spec.: 181.09 (MH) $^+$.

2-Benzoyloxycarbonylamino-3-(7-chloro-1H-indazol-5-yl)-acrylic acid methyl ester

A stirred suspension of potassium *tert*-butoxide (375 mg, 1.2 equiv.) in methylene chloride (20 mL) was cooled to -20°C and treated with a solution of N-benzoyloxycarbonyl- α -phosphonoglycine trimethyl ester (1.11 g, 1.2 equiv.) in methylene chloride (5 mL). After 10 min, 7-chloroindazole-5-carboxaldehyde (0.50 g, 2.79 mmol) in methylene chloride (5 mL) was added. The reaction was allowed to gradually warm to room temperature and was stirred for 3 days. The reaction was poured into a separatory funnel containing water and diethyl ether. The aqueous was extracted with diethyl ether (3x) which was washed with brine, dried over magnesium sulfate, and concentrated. Column chromatography gave 0.40 g (37%) of product along with 0.20 g (40%) of starting material. ^1H -NMR (CDCl_3 , 500 MHz) δ

(R)-2-Benzyloxycarbonylamino-3-(3,4-dinitro-phenyl)-propionic acid methyl ester

An oven-dried 500 mL Schlenk flask was put into a glove-bag filled with nitrogen. After the glove-bag was evacuated and filled with nitrogen (3x), the flask was sealed and taken out of the glove-bag and weighed. It was put back into the glove-bag and evacuated and filled with nitrogen (3x), then it was charged with (-)-1,2-bis((2R,5R)-2,5-diethylphospholano)benzene(cyclooctadiene)rhodium (I) trifluoromethanesulfonate. The flask was sealed and taken out of the glove-bag and weighed (784 mg, 1.08 mmol). 2-Benzyloxycarbonylamino-3-(3,4-dinitro-phenyl)-acrylic acid methyl ester (8.72 g, 21.7 mmol) was added to another 500 mL of Schlenk flask and was evacuated and filled with nitrogen (3x). Methylene chloride (350 mL, degassed with nitrogen for 2 h) was added and the resulting solution was transferred to the catalyst flask via cannula. The flask was purged and filled with hydrogen (4x) and the mixture was stirred at room temperature for 4h. The solvents were removed *in vacuo* and the residue was purified by silica gel chromatography using ethyl acetate/hexanes (1:1) as eluent to afford the title compound as a light tan gummy solid (99% yield and 99.2% ee determined by HPLC analysis using the following conditions: Chiralpak AD column (4.6 × 250 mm, 10 μm; A = ethanol, B = hexane; 40% B @ 1.0 mL/min for 14 min; retention times: 10.9 min for R enantiomer and 6.9 min for S enantiomer). ¹H-NMR (CDCl₃, 500 MHz) δ 7.80 (d, J = 8.0 Hz, 1H), 7.63 (s, 1H), 7.45 (d, J = 8.0 Hz, 1H), 7.38 – 7.31 (m, 5H), 5.37 (d, J = 6.0 Hz, 1H), 5.13 – 5.05 (m, 2H), 4.68 (d, J = 6.0 Hz, 1H), 3.71 (s, 3H), 3.36 (dd, J = 13.5, 5.0 Hz, 1H), 3.17 (dd, J = 13.5, 6.0 Hz, 1H).

-146-

PyHBr₃ (1.28 g, 4.02 mmol) was added in small portions over 30 min to a solution of (R)-2-benzyloxycarbonylamino-3-(1*H*-indol-5-yl)-propionic acid methyl ester (0.47 g, 1.34 mmol) in *t*-butanol (10 mL) while the reaction temperature was maintained between 25-30°C. The resulting mixture was stirred at room temperature for 3.5 h. The solvent was removed *in vacuo*, and the residue was extracted with ethyl acetate (2x). The combined organic phases were washed with brine and dried over sodium sulfate. After filtration, solvents were removed and the residue was azeotropically dried with anhydrous ethanol. The residue was dissolved in glacial acetic acid (10 mL) and zinc powder (0.88 g, 13.4 mmol) was added. The mixture was stirred at room temperature overnight. After the acetic acid was removed *in vacuo*, the residue was purified by flash chromatography on silica gel using ethyl acetate/hexanes [(1:3) first and then (3:2)] as eluent to afford the title compound as a white solid (41% for 2 steps). ¹H-NMR (CDCl₃, 500 MHz) δ 8.03 (s, 1H), 7.36 – 7.31 (m, 5H), 6.94 (s, 1H), 6.91 (d, *J* = 8.0 Hz, 1H), 6.73 (d, *J* = 7.5 Hz, 1H), 5.26 (d, *J* = 8.0 Hz, 1H), 5.11 (d, *J* = 12.0 Hz, 1H), 5.05 (d, *J* = 12.5 Hz, 1H), 4.61 (dd, *J* = 13.5, 6.0 Hz, 1H), 3.72 (s, 3H), 3.45 (s, 2H), 3.10 (dd, *J* = 14.0, 5.5 Hz, 1H), 3.00 (dd, *J* = 14.0, 6.0 Hz, 1H). ¹³CNMR (CDCl₃, 125 MHz) δ 177.7, 172.2, 155.7, 141.7, 136.3, 129.8, 128.9, 128.6, 128.3, 128.2, 125.8, 125.6, 109.8, 67.1, 55.1, 52.5, 38.0, 36.  20 mL, 0°C) was added *N,N'*-disuccinimidyl carbonate (155 mg). After 30 min, 3-piperidin-4-yl-3,4-dihydro-1H-quinazolin-2-one (120 mg) in methylene chloride (2 mL) was added via canula. The reaction was warmed to room temperature and

-168-

stirred overnight. The reaction was concentrated and purified by prep HPLC to give 99mg (36%). Mass spec.: 469.10 (MH)⁺.

Example 58

- 5 (±)-4-(2-Oxo-1,4-dihydro-2H-quinazolin-3-yl)-piperidine-1-carboxylic acid [2-[1,4']bipiperidiny-1'-yl-1-(2-methoxy-pyrimidin-5-ylmethyl)-2-oxo-ethyl]-amide

- To a solution of 3-(2-methoxy-pyrimidin-5-yl)-2-{[4-(2-oxo-1,4-dihydro-2H-quinazolin-3-yl)-piperidine-1-carbonyl]-amino}-propionic acid methyl ester (99 mg) in methanol (6 mL) was added a solution of lithium hydroxide monohydrate (18 mg) in water (1 mL). The reaction was stirred at room temperature for 4 h and cooled to 0°C. The reaction was treated with 1N hydrochloric acid (0.4 mL), concentrated. The residue obtained was dissolved in methylene chloride (3 mL), and treated sequentially with 4-piperidyl-piperidine (50 mg), triethylamine (88 µL), and bis-2-oxo-3-oxazolidinyl)phoshinic chloride (71 mg). The reaction was stirred overnight, concentrated, and purified by prep HPLC to give 103 mg (45%). LC/MS: t_R = 1.23 min, 605.54 (MH)⁺.

2-Benzyloxy-5-bromo-pyridine

- A suspension of 2,5-dibromopyridine (2.0 g, 8.4 mmol), dibenzo-18-crown-6 (0.14 g, .05 equiv), benzyl alcohol (1.1 mL, 1.3 equiv), and potassium hydroxide (1.1 g, 2.4 equiv) in toluene (30 mL) were heated at reflux for 3 h in an apparatus fitted with a Dean-Stark trap. The suspension was cooled, concentrated, suspended in water, and extracted into methylene chloride. The combined organic phases were

-169-

washed with water, then brine, dried over magnesium sulfate, and concentrated to give 1.9 g (85%) which was used without purification. Mass spec.: 264.25 (MH)⁺.

6-Benzyloxy-pyridine-3-carbaldehyde

5

To a solution of 2-benzyloxy-5-bromo-pyridine (1.64 g, 6.2 mmol) in tetrahydrofuran (25 mL, -78°C) was added n-butyllithium (2.5 M in hexane, 2.61 mL, 1.05 equiv). After 1 h at -78°C, dimethylformamide (0.97 mL, 2 equiv) was added and the mixture stirred for 30 min. The reaction was quickly poured into a stirred solution of 5% aqueous sodium bicarbonate (50 mL) and extracted with diethyl ether (3x). The ethereal was washed with brine, dried over magnesium sulfate, and concentrated to give 1.16 g (quant.) which was used without purification. Mass spec.: 186.34 (MH)⁺.

15 2-Benzyloxycarbonylamino-3-(6-benzyloxy-pyridin-3-yl)-acrylic acid methyl ester

To a stirred suspension of potassium *tert*-butoxide (0.440 g, 1.7 equiv) in methylene chloride (25 mL) at -20°C was added N-benzyloxycarbonyl- α -phosphonoglycine trimethyl ester (1.3 g, 1.7 equiv) in methylene chloride (5 mL). The resulting solution was stirred for 5 min and treated with the 6-benzyloxy-pyridine-3-carbaldehyde (0.49 g, 2.28 mmol) in methylene chloride (5 mL). The reaction was stirred at -20°C for 1 h, allowed to gradually warm to 0°C, and poured into a separatory funnel containing water and diethyl ether. The reaction was

20

-170-

extracted with diethyl ether (2x), washed with brine, dried over magnesium sulfate, and concentrated to give 0.98 g (quant.) as an oil which was used without purification. Mass spec.: 419.32 (MH)⁺.

- 5 (±)-2-Benzyloxycarbonylamino-3-(6-benzyloxy-pyridin-3-yl)-propionic acid methyl ester

- A flask was charged with 2-benzyloxycarbonylamino-3-(6-benzyloxy-pyridin-3-yl)-acrylic acid methyl ester (0.50 g, 1.2 mmol), Wilkinson's catalyst (200 mg, 0.2 equiv), methanol (5 mL), and toluene (3 mL). The flask was flushed with nitrogen, then hydrogen, heated to 35°C, and allowed to stir under an atmosphere of hydrogen for 4 days. The reaction was flushed with nitrogen, diluted with methanol, filtered, and concentrated to afford the crude product which was purified by column chromatography to give 145 mg (29%).

15

- (±)-2-Amino-3-(6-benzyloxy-pyridin-3-yl)-propionic acid methyl ester

- To a stirred solution of 2-benzyloxycarbonylamino-3-(6-benzyloxy-pyridin-3-yl)-propionic acid methyl ester (130 mg, 0.31 mmol) in methylene chloride (5 mL, 0°C) was added trimethylsilyl iodide (44 µL, 1.0 equiv). The ice bath was removed and stirring continued for 1 h. Reaction was poured into saturated sodium bicarbonate, extracted with ethyl acetate (3x), washed with brine, dried over

20

-171-

magnesium sulfate, and concentrated to give 81mg (91%) which was used without purification. Mass spec.: 287.37 (MH)⁺.

(±)-3-(6-Benzyloxy-pyridin-3-yl)-2-{[4-(2-oxo-1,4-dihydro-2H-quinazolin-3-yl)-piperidine-1-carbonyl]-amino}-propionic acid methyl ester

To a stirred solution of 2-amino-3-(6-benzyloxy-pyridin-3-yl)-propionic acid methyl ester (60 mg, 0.21 mmol) in methylene chloride (1 mL, 0°C) was added carbonyl diimidazole (34 mg, 1.0 equiv.). After 15 min, a solution of 3-piperidin-4-yl-3,4-dihydro-1H-quinazolin-2-one (58 mg, 1.2 equiv.) in methylene chloride (0.5 mL) was added via canula. The ice bath was removed and stirring continued overnight. The reaction was concentrated and purified by column chromatography to give 59 mg (52%). Mass spec.: 544.49 (MH)⁺.

To a stirred solution of 3-(6-benzyloxy-pyridin-3-yl)-2-{[4-(2-oxo-1,4-dihydro-2H-quinazolin-3-yl)-piperidine-1-carbonyl]-amino}-propionic acid methyl

-172-

ester (59 mg, 0.11 mmol) in methanol (3 mL) was added a solution of lithium hydroxide monohydrate (9.1 mg, 2 equiv) in water (0.5 mL). The reaction was stirred 2 h at room temperature, cooled to 0°C, quenched by addition of 1N hydrochloric acid (0.15 mL), and concentrated. The crude product was used without
5 purification. The crude acid was dissolved in methylene chloride (2 mL, 0°C), and treated sequentially with 4-piperidino-piperidine (34 mg, 1.8 equiv), triethylamine (35 μ L, 2.3 equiv.), and bis-2-oxo-3-oxazolidinyl)phoshinic chloride (34 mg, 1.2 equiv). The ice bath was removed and the reaction allowed to stir overnight. The reaction was concentrated and purified by Prep TLC to give 30.3 mg (41%). LC/MS:
10 t_R = 1.49 min, 680.29 (MH)⁺.

Piperidine-1,4-dicarboxylic acid 1-*tert*-butyl ester 4-ethyl ester

To a solution of ethyl isonipecotate (5.00 g, 0.032 mol) and triethylamine (4.9 mL, 0.035 mmol) in dichloromethane (25 mL) at 0°C was slowly added a solution of
5 di-*tert*-butyldicarbonate (7.2 g, 0.033 mol) in dichloromethane (25 mL). The reaction mixture was stirred at room temperature overnight, then washed with potassium hydrogen sulfate three times and with brine once. The organic extract was dried over anhydrous sodium sulfate, filtered and concentrated in vacuum to give the desired product (8.23 g, 100%) as colorless oil. ¹H NMR (C₆D₆, 500 MHz) δ 3.88 (q, *J* = 7.5
10 Hz, 2H), 2.52 (m, 1H), 1.60-1.48 (m, 8H), 1.42 (s, 9H), 0.92 (t, 3H). Mass spec.: 280.44 (M+Na)⁺.

4-(2-Nitro-benzyl)-piperidine-1,4-dicarboxylic acid 1-*tert*-butyl ester 4-ethyl ester

15 To a solution of piperidine-1,4-dicarboxylic acid 1-*tert*-butyl ester 4-ethyl ester (8.23 g, 0.032 mol) in tetrahydrofuran (85 mL) was slowly added a solution of sodium bis(trimethylsilyl)amide (44 mL, 0.044 mol). After the resulting mixture had been stirred at -78°C for 1 h, a solution of 2-nitrobenzyl bromide (8.21 g, 0.038 mol) was added. The reaction mixture was allowed to warm up to room temperature and
20 was stirred overnight. It was then concentrated and the residue was partitioned between water and ethyl acetate. The organic extract was washed with brine, dried over anhydrous magnesium sulfate, filtered, and concentrated under vacuum. The

-174-

final product was purified from the complex reaction mixture by way of column chromatography on silica gel (eluent – hexanes – ethyl acetate 4:1) to give the desired product (1.61 g, 13%) as brown oil. Mass spec.: 415.38 (M+Na)⁺.

5 4-(2-Amino-benzyl)-piperidine-1,4-dicarboxylic acid 1-*tert*-butyl ester 4-ethyl ester

A mixture of 4-(2-nitro-benzyl)-piperidine-1,4-dicarboxylic acid 1-*tert*-butyl ester 4-ethyl ester (1.61 g, 4.102 mmol) and 10% palladium on charcoal (0.10 g) in ethanol (190 mL) was hydrogenated at 50 psi overnight. The resultant mixture was
10 filtered through a plug of celite, and the filtrate concentrated under vacuum to provide the desired product (1.29 g, 99%) as colorless oil. Mass spec.: 363.45 (MH)⁺.

4-(2-Amino-benzyl)-piperidine-4-carboxylic acid ethyl ester hydrochloride

15

To a solution of 4-(2-amino-benzyl)-piperidine-1,4-dicarboxylic acid 1-*tert*-butyl ester 4-ethyl ester (1.29 g, 4.102 mmol) in dichloromethane (15 mL) was added a 4.0M solution of hydrogen chloride in dioxane (5 mL). The resulting solution was stirred at room temperature overnight. The concentration of the solution under
20 vacuum provided the title compound (1.23 g, 100%) as white solid, which was used in the next step without purification. Mass spec.: 263.40 (MH)⁺.

-175-

3,4-Benzo-2,9-diazaspiro[5.5]undeca-1-one

A solution of 4-(2-amino-benzyl)-piperidine-4-carboxylic acid ethyl ester hydrochloride (1.23 g, 4.102 mmol) was dissolved in methanol and the resulting
 5 solution was stirred at room temperature overnight. The solution was diluted by half with water and passed through a short plug of the hydroxide form of AG[®] 1-X2 ion-exchange resin (100-200 mesh), eluting with 50% aqueous methanol. The evaporation of the collected fractions gave the desired product (0.89 g, 100%) as white solid. ¹H-NMR (CD₃OD, 500 MHz) δ 7.23 (m, 2H), 7.05 (d, *J* = 7.5 Hz, 1H),
 10 6.89 (d, *J* = 8.0 Hz, 1H), 3.46-3.41 (m, 2H), 3.34-3.30 (m, 2H), 2.14-2.09 (m, 2H), 1.73-1.67 (m, 4H). Mass spec.: 217.46 (MH)⁺.

(R)-2-Amino-3-benzo[b]thiophen-3-yl-1-[1,4']bipiperidiny-1'-yl-propan-1-one, dihydrochloride

15

To a well stirred solution of 3-benzo[b]thiophen-3-yl-(2R)-2-*tert*-butoxycarbonylamino-propionic acid (1.0 g, 3.1 mmol) in methylene chloride (30 mL) at room temp was added 4-piperidinopiperidine (573 mg, 3.4 mmol), triethylamine (1.3 mL, 9.3 mmol) followed by 3-(diethoxyphosphoryloxy)-1,2,3-
 20 benzotriazin-4(3H)-one (1.02 g, 3.4 mmol). After 3 h, the reaction mixture was treated with aqueous sodium hydrogencarbonate (15 mL), brine (20 mL) and dried (sodium sulfate). The crude mixture was purified by flash chromatography using 5% methanol in methylene chloride to give (1R)-1-benzo[b]thiophen-3-ylmethyl-2-

Succinate Intermediates and Examples

3-Benzo[b]thiophen-3-yl-acrylic acid

- 5 A suspension of 1-benzothiophene-3-carbaldehyde (4.9 g, 0.03 mol), malonic acid (6.6 g, 0.06 mol) and piperidine (1 mL) in 100 mL anhydrous pyridine was heated at 110°C overnight. The reaction mixture was cooled to room temperature and the solvent was removed *in vacuo*. The residue was taken up in 100 mL of water and 1 N hydrochloric acid was added to adjust the pH of this solution to ca. 3. The
- 10 suspension was filtered and the yellow solid was collected, washed with water (3 x 50 mL) and concentrated *in vacuo* to give the indicated product with 95% purity (5.65g, 91%).

3-Benzo[b]thiophen-3-yl-propionic acid

- 15 A suspension of 3-benzo[b]thiophen-3-yl-acrylic acid: (5.6 g, 0.027 mol) and 10% Pd/C (600 mg) in 1:1 methanol/ethyl acetate (50 mL) was hydrogenated in a Parr apparatus at 50 psi overnight. The mixture was filtered and concentrated to give the crude product without further purification (ca.100% conversion). Mass spec.:
- 20 205(MH)⁺.

3-(3-Benzo[b]thiophen-3-yl-propionyl)-4(R)-benzyl-oxazolidin-2-one

-180-

To a solution of 3-benzo[b]thiophen-3-yl-propionic acid (2.1g, 0.010 mol), triethylamine (4.12 g, 0.040 mol) in anhydrous tetrahydrofuran (100 mL) at 0°C was added pivaloyl chloride (1.38 mL, 0.011 mol). After stirring for 1.5 h at 0°C, lithium chloride (0.475 g, 0.011 mol) and (*R*)-4-benzyl-2-oxazolidinone (1.988 g, 0.011 mol) were added. The reaction mixture was allowed to warm up to room temperature and stirred overnight. Then the mixture was washed with water (3 x 150 mL). The organic layer was separated, dried, and evaporated to give the crude product. The title product was obtained as a brown oil (90%) by flash chromatography on silica gel eluting with 100% methylene chloride. This compound was used immediately in the following procedure.

3(*S*)-Benzo[b]thiophen-3-ylmethyl-4-(4-benzyl-2-oxo-oxazolidin-3-yl)-4-oxo butyric acid *tert*-butyl ester

To a solution of 3-(3-benzo[b]thiophen-3-yl-propionyl)-4-benzyl-oxazolidin-2-one (3.35 g, 9.18 mmol) in 100 mL anhydrous tetrahydrofuran at -78°C was added lithium diisopropyl amide in tetrahydrofuran (6.1 mL, 11.01 mmol) and the reaction mixture was stirred for 30 min. Following addition of *t*-butyl bromoacetate (1.62 mL, 11.01 mmol) at -78°C, the mixture was stirred overnight while it was allowed to warm to room temperature. The solvent was evaporated and the residue diluted with ethyl acetate. The organic layer was washed with water (3 x 100 mL), dried, filtered, and concentrated to give the crude product. The title product was obtained by filtration through a pad of silica, eluting with methylene chloride (49 %).

2(*S*)-Benzo[b]thiophen-3-ylmethyl-succinic acid, 4-*tert*-butyl ester

-181-

To a stirred solution of 3-benzo[b]thiophen-3-ylmethyl-4-(4-benzyl-2-oxo-oxazolidin-3-yl)-4-oxobutyric acid *tert*-butyl ester (2.15 g, 4.49 mmol) in tetrahydrofuran (50 mL) and water (30 mL) at 0°C was added 30 % aqueous hydrogen peroxide (1 mL) followed by lithium hydroxide (0.2155 g, 8.98 mmol). The reaction mixture was stirred overnight. Tetrahydrofuran was removed *in vacuo* and the resulting solution was acidified with 10% citric acid, and extracted with ethyl acetate (3 x 50 mL). The organic layer was washed with sodium bisulfite solution, dried and concentrated to give the title product.

To a mixture of 7-methyl indazole aldehyde (0.2619 g, 1.64 mmol) and DBE-4 dibasic ester (dimethyl succinate) (0.32 mL, 2.45 mmol) in *t*-butanol (20 mL) was added potassium *t*-butoxide (0.4036 g, 3.60 mmol). The reaction mixture was heated at 50°C for 2h under nitrogen. After a further 16h at room temperature, the solvent was removed *in vacuo* and the residue was taken up in water (100 mL) and extracted with ethyl acetate (3 x 50 mL). The aqueous layer was acidified with 1 N hydrochloric acid to pH 3 ~ 4 and extracted with ethyl acetate (3 x 50 mL). The combined ethyl acetate solution was dried and concentrated *in vacuo* to give the crude product as a yellow solid (99%, cis/trans isomer approximately 40:60). The crude mixture was carried to next step without further purification. Mass spec.: 275 (MH)⁺.

The starting amine, 2-amino-1-[1,4']bipiperidiny-1'-yl-4-[4-(2-oxo-1,4-dihydro-2H-quinazolin-3-yl)-piperidin-1-yl]-butane-1,4-dione, was dispersed in a 96-well mini-reactor (ca. 10 mg each) in 1 mL dichloroethane. Individual acyl chlorides (ca. 2 equiv.) were added followed by a resin-bound solid-phase piperidine base (4 equiv). The block was shaken overnight. Approximately 4 equivalents of tris-amine resin was added to each well and the mini-reactor was shaken for another 5 h. The reaction mixtures were filtered, and purified by either preparative HPLC or filtration through an SCX cartridge or both. HPLC retention times and mass spectral data for each example are listed in Table 2.

2-(1H-Indazol-5-ylamino)-succinic acid 4-*tert*-butyl ester 1-ethyl ester

5 To a solution/suspension of 5-aminoindazole (1.01 g, 7.6 mmol) in tetrahydrofuran (20 mL) was added ethyl glyoxlate solution (ca. 50% in toluene, 1.7 mL, 1.1 equiv) in one portion followed by magnesium sulfate (4.6 g). The mixture was stirred at room temperature overnight (23 h) and then filtered and concentrated *in vacuo*. The resulting crude imine intermediate (1.3 g, 6 mmol) was dried by

10 azeotroping with anhydrous benzene and further dried under high vacuum. The residue was then dissolved in tetrahydrofuran (20 mL) and cooled at 0°C. A solution of 2-*tert*-butoxy-2-oxoethylzinc chloride (0.5 M in ether, 24 mL, 2 equiv) was then slowly added. After stirring at 0°C for 1 h, the mixture was stored at 4°C overnight. The mixture was then diluted with ethyl acetate and quenched with half-saturated

15 ammonium chloride solution along with a minimum amount of 0.5 N HCl to dissolve the precipitated solids. The layers were separated and the aqueous layer was extracted with ethyl acetate. The combined organic layers were washed with water and saturated sodium bicarbonate solution. The organic layer was dried over sodium sulfate and concentrated *in vacuo*. The crude product was purified by flash column

20 chromatography on silica gel, eluting with 10% methanol in methylene chloride, to afford the desired product (1.3 g, 65%) as a tan oil. ¹H-NMR (400 MHz, CDCl₃) δ 7.89 (1H, s), 7.40 – 7.27 (1H, m), 6.98 – 6.77 (2H, m), 4.42 – 4.35 (1H, m), 4.30 – 4.12 (3H, m), 2.80 (2H, d, J = 4.4 Hz), 1.43 (9H, s), 1.27 – 1.17 (4H, m). Mass spec.: 356.24 (M+Na)⁺, 278.23 (M – ^tBu)⁺, t_R = 1.287 min.

2-(1H-Indazol-5-ylamino)-succinic acid 1-ethyl ester

A stirred solution of 2-(1H-indazol-5-ylamino)-succinic acid 4-*tert*-butyl ester
1-ethyl ester (123.6 mg, 0.37 mmol) in methylene chloride (2 mL) and trifluoroacetic
5 acid (0.5 mL) was stirred at room temperature overnight. The reaction mixture was
then diluted with ethyl acetate and washed with saturated ammonium chloride
solution, water and brine. The organic layer was dried and concentrated to give a
dark green oil: LC/MS: $t_R = 0.643$ min, 278.19 (MH)⁺.

10 2-(1H-Indazol-5-ylamino)-4-oxo-4-[4-(2-oxo-1,4-dihydro-2H-quinazolin-3-yl)-
piperidin-1-yl]-butyric acid ethyl ester

To a stirred solution of 2-(1H-indazol-5-ylamino)-succinic acid 1-ethyl ester
(84 mg, 0.215 mmol) in methylene chloride (1mL) was added the amine (99 mg,
15 0.429 mmol, 2 equiv) followed by DEPBT (128 mg, 0.43 mmol, 2 equiv.) and
triethylamine (70 μ L, 0.47 mmol, 2.2 equiv). The mixture was stirred overnight and
then diluted with ethyl acetate and washed with half-saturated ammonium chloride
solution, water and brine. The organic layer was dried and concentrated to a tan oil.
The crude product was purified by flash column chromatography on silica gel,
20 eluting with 10% methanol in methylene chloride, to give the desired product (36.2

LC/MS: $t_R = 1.130$ min, 491.37 (MH) $^+$.

2-(1H-Indazol-5-ylamino)-4-oxo-4-[4-(2-oxo-1,4-dihydro-2H-quinazolin-3-yl)-piperidin-1-yl]-butyric acid

To a solution of the ethyl ester (34 mg, 0.069 mmol) in tetrahydrofuran (0.3 mL) was added lithium hydroxide in water (1M, 280 μL , 4 equiv) and the mixture was stirred at room temperature for 17 h. The solution was dried under a stream of nitrogen. To the residue was added 0.2 mL tetrahydrofuran and 0.2 mL anhydrous benzene and the suspension was blown dry again with a stream of nitrogen. LC/MS: $t_R = 0.900$ min, 463.30 (MH) $^+$.

CGRP Binding Assay

Tissue Culture. SK-N-MC cells were grown at 37 °C in 5% CO₂ as a monolayer in medium consisting of MEM with Earle's salts and L-glutamine (Gibco)

5 supplemented with 10% fetal bovine serum (Gibco).

Cell Pellets. The cells were rinsed twice with phosphate-buffered saline (155 mM NaCl, 3.3 mM Na₂HPO₄, 1.1 mM KH₂PO₄, pH 7.4), and incubated for 5-10 min. at 4 °C in hypotonic lysis buffer consisting of 10 mM Tris (pH 7.4) and 5 mM EDTA.

10 The cells were transferred from plates to polypropylene tubes (16 x 100 mm) and homogenized using a polytron. Homogenates were centrifuged at 32,000 x g for 30 min. The pellets were resuspended in cold hypotonic lysis buffer with 0.1% mammalian protease inhibitor cocktail (Sigma) and assayed for protein concentration. The SK-N-MC homogenate was then aliquoted and stored at -80 °C until needed.

15

Radioligand Binding Assay. The compounds of invention were solubilized and carried through serial dilutions using 100% DMSO. Aliquots from the compound serial dilutions were further diluted 25 fold into assay buffer (50 mM Tris-Cl pH 7.5, 5 mM MgCl₂, 0.005% Triton X-100) and transferred (volume 50 µl) into 96 well

20 assay plates. [¹²⁵I]-CGRP (Amersham Biosciences) was diluted to 60 pM in assay buffer and a volume of 50 µl was added to each well. SK-N-MC pellets were thawed, diluted in assay buffer with fresh 0.1% mammalian protease inhibitor cocktail (Sigma), and homogenized again. SK-N-MC homogenate (5 µg/well) was added in a volume of 100 µl. The assay plates were then incubated at room

25 temperature for two hours. Assays were stopped by addition of excess cold wash buffer (20 mM Tris-Cl pH 7.5, 0.1% BSA) immediately followed by filtration over glass fiber filters (Whatman GF/B) previously soaked in 0.5% PEI. Non-specific binding was defined with 1 µM beta-CGRP. Protein bound radioactivity was determined using a gamma or scintillation counter. The IC₅₀ was defined as the

30 concentration of a compound of invention required to displace 50% of radioligand binding.

Cyclic AMP Assay

Functional Antagonism. Antagonism of the compounds of invention was determined by measuring the formation of cyclic AMP (adenosine 3'5'-cyclic monophosphate) in SK-N-MC cells that endogenously express the human CGRP receptor. CGRP receptor complex is coupled with Gs protein and CGRP binding to this complex leads to the cyclic AMP production via Gs - dependent activation of an adenylate cyclase (Juaneda C et al., TiPS, 2000; 21:432-438; incorporated by reference herein). Consequently, CGRP receptor antagonists inhibit CGRP – induced cyclic AMP formation in SK-N-MC cells (Doods H et al., Br J Pharmacol, 2000; 129(3):420-423) ; incorporated by reference herein). For cyclic AMP measurements SK-N-MC cells were incubated with 0.3 nM CGRP alone or in the presence of various concentrations of the compounds of invention for 30 min at room temperature. Compounds of

-262-

invention were pre-incubated with SK-N-MC cells for 15 minutes before the addition of CGRP to allow receptor occupancy (Edvinsson et al., Eur J Pharmacol, 2001, 415:39-44; incorporated by reference herein). Cyclic AMP was extracted using the lysis reagent and its concentration was determined by radioimmunoassay using RPA559 cAMP SPA Direct Screening Assay Kit (Amersham Pharmacia Biotech). IC₅₀ values were calculated using Excel fit. The tested compounds of invention were determined to be antagonists as they exhibited a dose – dependent inhibition of the CGRP – induced cyclic AMP production. See Table 3 for summary of results.

- 10 *Schild Analysis.* Schild analysis can be used to characterize the nature of antagonism of the compounds of invention. The dose response of CGRP stimulated cAMP production was generated either with CGRP alone, or in the presence of various concentrations of compounds of invention. The antagonist dose is plotted as X against the dose ratio (defined as IC₅₀ of agonist with the presence of the compounds divided by the IC₅₀ of the agonist alone) minus 1 as Y. Linear regression was then performed with both X and Y axis log-transformed. A slope that does not differ significantly from unity (1) indicates competitive antagonism. K_b is the dissociation constant of the antagonist.

Ex Vivo Human Cerebral Artery Assay

- 5 *Rationale and Overview.* To provided direct evidence of the ability for novel compounds to reverse CGRP-induced dilation in human cerebral vessels, an ex vivo assay was designed. Briefly, isolated vessel rings were mounted in a tissue bath where vessels were pre-contracted with potassium chloride (KCl) and fully dilated with hCGRP, then this relaxation was reversed by the cumulative addition of CGRP-
10 receptor antagonists (complete details follow).

- Tissue Samples.* Autopsy samples of human arteries were obtained from vendors (ABS Inc. or NDRI). All vessels were transported on ice-cold HEPES buffer (composition in mM: NaCl 130, KCl 4, KH₂PO₄ 1.2, MgSO₄ 1.2, CaCl₂ 1.8,
15 Glucose 6, NaHCO₃ 4, HEPES 10, EDTA 0.025). Upon receipt, the vessels were placed in cold Kreb's buffer (composition in mM: NaCl 118.4, KCl 4.7, KH₂PO₄ 1.2, MgSO₄ 1.2, CaCl₂ 1.8, Glucose 10.1, NaHCO₃ 25) saturated with carbogen (5% CO₂ and 95 % oxygen).

- 20 *Isolated Tissue Baths.* The vessels were cleaned of connective tissues and cut into cylindrical segments of 4-5mm in length. The vessels were then mounted in tissue baths between two stainless steel hooks; one of which is fixed and the other of which was connected to a force displacement transducer. The vessel tension was continuously recorded using a data acquisition system (Powerlab, ADInstruments,
25 Mountain View, CA) connected to the transducer. The tissue baths containing Krebs buffer and mounted vessels were temperature (37 °C) and pH (7.4) controlled with continuous bubbling of carbogen. The artery segments were allowed to equilibrate for about 30-45 minutes until a stable resting tone was achieved. Prior to the assay,

-264-

vessels were primed (conditioned) with 100 mM KCl and subsequently washed. The vessels were pre-contracted with 10 mM KCl and fully dilated with 1 nM hCGRP. Concentration-response curves to CGRP-receptor antagonists were performed by the cumulative addition of drugs in half log units in fully dilated vessels. At each concentration, the effects of the drugs were expressed as % reversal of CGRP-induced relaxation in each vessel. The actual assay and data analysis were performed for each vessel individually, fitting the concentration-response data to a four parameter logistic function by non-linear regression analysis, to estimate the EC50 values. A summary of results is provided in Table 3.

Non-Terminal Method for Assessing In Vivo Efficacy of Small Molecule CGRP-receptor antagonists in Mammals

Overview. Blocking cerebral artery dilation induced by calcitonin gene-related peptide (CGRP) has been proposed as a treatment for migraine headache, however, novel small molecule CGRP-receptor antagonists have shown species-specific differences with relatively poor activity in rodents (Mallee et al. J Biol Chem 2002 277:14294) requiring new models for assessment of in vivo efficacy. Non-human primates (e.g., marmosets) are the only animals known to have human-like CGRP receptor pharmacology conferred by the presence of the specific amino acid residue (Trp74) in their RAMP1 sequence which is responsible for the phenotype of the human receptor (Mallee et al. J Biol Chem 2002 277:14294). Since current migraine models primarily use rats (Escott et al. Brain Res 1995 669:93; Williamson et al. Cephalalgia 1997 17:525), or are invasive, terminal procedures in primates (Doods et al. Br J Pharmacol 2000 129:420), a novel non-invasive, survival model in non-human primates for in vivo efficacy assessment of CGRP-receptor antagonists as in the present invention is a significant contribution. While it is known that trigeminal activation increases both cerebral (Goadsby & Edvinsson, 1993) and facial blood flow (Doods et al., 2000), demonstration of a direct relationship between facial blood flow and cerebral artery dilation conducted in the same animals was not known. Therefore, before initiating studies in non-human primates, laser Doppler measurement of facial blood flow was directly validated in the rat as a surrogate for cerebral artery dilation in terminal studies that measured both cerebral artery

diameter and changes in facial blood flow in the same animals (see Figure 2. Direct Validation of Facial Blood Flow as Surrogate for Cerebral Artery Dilation in the Rat). In both measures, comparable increases were induced by i.v. CGRP and blocked by the peptide antagonist h α CGRP(8-37). Next, the method of i.v. CGRP-induced changes in facial blood flow was validated as a recovery model in isoflurane anesthetized rats using h α CGRP(8-37). The survival method was then established in non-human primates and a dose-response study characterizing i.v. CGRP activity was completed (see Figure 3. Dose-Response for h α CGRP in Non-Human-Primate Laser Doppler Facial Blood Flow). Peptide and small-molecule CGRP-receptor antagonists were used to validate the non-human primate model. Pre-treatment with small molecule antagonists or h α CGRP(8-37) dose-dependently inhibited i.v. CGRP-stimulated increases in primate facial blood flow (see Figure 4. Inhibition of CGRP-Induced Changes in Non-Human Primate Facial Blood Flow), without altering blood pressure (see Figure 5. Effect of CGRP Antagonist on Non-Human Primate Blood Pressure). Post-treatment of antagonists also reversed CGRP-induced increases in facial blood flow (not shown). This survival model provides a novel, non-invasive recovery procedure for evaluating prophylactic and abortive effects of CGRP-receptor antagonists in non-human primates, or in transgenic animals with humanized RAMP1 (Trp74) which have similar CGRP receptor pharmacology, as a surrogate marker for activity in cerebral vessel diameter.

Animals. Adult male and female common marmosets (*Callithrix jacchus*) purchased from Harlan and weighing 350-550 g served as subjects. Other mammals endogenously expressing RAMP1 having Trp 74 or transgenic mammals with humanized RAMP1 having Trp 74 can also be employed in the method described herein.

Anesthesia & Surgical Preparation. Animals are anesthetized by isoflurane inhalation in an induction chamber (4-5% rapid induction, maintained with 1-2.5%; Solomon et al., 1999). Anesthesia is maintained by delivering a constant supply of air:oxygen (50:50) and isoflurane via face mask, or by intubation and ventilation (with blood gas monitoring). Body temperature is maintained at 38 ± 0.5 °C by

-266-

placement on an automated temperature controlled surface with rectal probe. A small area of fur (approx. 1.5 cm square) is removed from one or both sides of the face by application of a depilatory cream and/or shaving. Surgical areas are clipped and prepared with betadine. An i.v. line is placed in any accessible vein for the administration of test compounds and CGRP-receptor agonist and, if needed, withdrawal of blood samples (max 2.5 ml, 10%) for blood gas monitoring and content analysis. A solution of 5% dextrose is administered i.v. in order to maintain blood sugar levels. Anesthesia depth is monitored by measuring blood pressure and heart rate using a non-invasive arm cuff method and a pulse oximeter, respectively. Guanethidine 5-10 mg/kg i.v., supplemented with 5 mg/kg i.v. as needed, may be given to stabilize the peak flux in facial blood flow seen with repeated stimulation-induced changes in blood flow (Escott et al., 1999; incorporated by reference herein). Microvascular blood flow is monitored by attaching a self adhesive laser Doppler flow probe to the facial skin.

15

Compound Administration Test compounds may be administered i.v. (0.01–5 ml/kg), i.m. (0.01–0.5 ml/kg), s.c. (0.01–5 ml/kg) or p.o. (0.1–10 ml/kg) (Diehl et al., 2001; incorporated by reference herein). CGRP-receptor agonists may be delivered i.v. (0.01–5 ml/kg), i.d. (10–100 μ l/site) or s.c. (10–100 μ l/site).

20

Laser Doppler Flowmetry A control increase in facial blood flow is induced by administration of a vasodilator, such as CGRP (0.05–100 μ g/kg i.v.) or 2–20 pmol/site i.d) or adrenomedullin (ADM, 0.05–5 mg/kg i.v. or 10–100 pmol/site i.d.). Test compound or vehicle is administered either before (pre-treatment) or after (post-treatment) subsequent repeat administration of the vasodilating agent, providing the ability to assess prophylactic or therapeutic actions. Blood pressure is monitored continuously to ensure adequate depth of anesthesia, and anesthetic is adjusted to maintain stable levels that match pre-treatment values. During collection of laser Doppler flowmetry data, isoflurane may be reduced to 0.25-0.75% as previous electrophysiologic studies in marmosets found that recordings were sensitive to isoflurane concentration (Solomon, 1999; incorporated by reference herein). To

25
30

-267-

reduce the number of animals used, the effect of test compound on i.v. vasodilator-induced changes in blood flow may be repeated up to 6 times in a single session.

5 *Recovery* Animals are returned to the transport cage which is placed on a temperature controlled surface to keep the animals warm until fully awake and ambulatory. Animals may be tested again after 7-14 days rest, and may be tested repeatedly at 7-14 day intervals depending on the health of the animal.

30 *Departures from Other Migraine Models.* This invention represents a novel migraine model and is remarkably distinct from other migraine models. Some of the distinguishing characteristics of the method of the present invention include: (i) the

-268-

only survival model of migraine in any species; (ii) the only model to demonstrate the abortive (post-treatment) effects of CGRP antagonists on active induced increases in blood flow; (iii) the only demonstration of a direct relationship between facial blood flow and intracranial artery dilation carried out in the same animals; (iv) the only model to use non-invasive surgical techniques, and does not require catheter placement, intubation, or neuromuscular blockade; (v) the only primate model to use exogenous CGRP as the stimulus and demonstrate pretreatment blockade by CGRP antagonism and post-treatment reversal by CGRP antagonism; (vi) the only migraine model to use isoflurane anesthesia in spontaneously breathing animals. The models described in Williamson et al., Sumatriptan inhibits neurogenic vasodilation of dural blood vessels in the anaesthetized rat-intravital microscope studies. may in turn additionally be substituted in the
25 phenyl moiety by a fluorine, chlorine or
bromine atom, or by an alkyl, trifluoromethyl,
amino or acetylamino group;

D is O, NCN or NSO₂C₁₋₃alkyl;

A is C, N or CH;

30 m and n are independently 0, 1 or 2;
provided that

-282-

if m and n are 0, then A is not N;

if m is 2, then n is not 2; or

if n is 2, then m is not 2;

E is N, CH or C;

5 p is 0 or 1;

if p is 1, then G, J and E together form A^x or A^y;

10 A^x is a fused heterocycle having two fused rings with 5 to 7
members in each of said rings, said heterocycle
containing one to four of the same or different
heteroatoms selected from the group consisting of O, N
and S; and

optionally containing 1 or 2 carbonyls wherein the
carbon atom of said carbonyl is a member of
said fused heterocycle;

15 A^y is a 4 to 6 membered heterocycle containing one to three
heteroatoms selected from the group consisting of O, N
and S; and

20 optionally containing 1 to 2 carbonyls, wherein the
carbon atom of said carbonyl is a member of
said 4 to 6 membered heterocycle;

25 wherein A^x and A^y are optionally substituted with C₁₋₄alkyl, C₁₋₄alkoxy, C₁₋₄haloalkyl, cyano, C₃₋₇cycloalkyl, phenyl, halophenyl, halo, furanyl, pyrrolyl, pyrrolinyl, pyrrolidinyl, imidazolyl, imidazolinyl, imidazolidinyl, pyrazolyl, pyrazolinyl, pyrazolidinyl, pyridyl, pyrimidinyl, piperidinyl, piperazinyl or morpholino; or

5 wherein

GJA' is A^x or A^y; and

GJA" is A^x or A^y;

provided that

A^x is not a 1,3-diaza-fused heterocycle;

10 and

A^y is not a 1,3-diaza-heterocycle;

and further provided that

if Q is Q", then R³ is R^{3a}; and

if Q is Q', then

15 R³ is R^{3b}; or

R³ is R^{3a}, p is 0 and G, J and A together form GJA".

2. A compound according to claim 1, wherein Q is Q' and R³ is R^{3b}.
3. A compound according to claim 1, wherein Q is Q', R³ is R^{3a} and p is 0 such that G, J and A together form GJA".
- 20 4. A compound according to claims 2 or 3, wherein Q is Q' and U is CH₂.
5. A compound according to claims 2 or 3, wherein Q is Q' and U is NH.
6. A compound according to claim 1, wherein Q is Q".
7. A compound according to claim 6, wherein Q" is NH(S^y)_sR³.
8. A compound according to claim 6, wherein Q" is NHC(O)(S^y)_sR³.
- 25 9. A compound according to claim 6, wherein Q" is NHC(O)O(S^y)_sR³.
10. A compound according to claim 6, wherein Q" is NHC(O)NH(S^y)_sR³.
11. A compound according to claim 1, wherein V is OR⁴.

12. A compound according to claim 1, wherein V is $-N(R^1)(R^2)$.

13. A compound according to claim 1, wherein R^4 is H, C_{1-6} alkyl or $(C_{1-4}$ alkylene) $_0$.
 $_1R^4$ and R^4 is C_{3-7} cycloalkyl.

14. A compound according to claim 1, wherein V is $-N(R^1)(R^2)$ and

5 R^1 and R^2 are each independently L^1 , wherein L^1 is selected from the
 group consisting of H, C_{1-6} alkyl, $-C_{1-6}$ alkylene-amino(C_{1-}
 $_3$ alkyl) $_2$, C_{3-7} cycloalkyl, phenyl, azetidiny, adamantyl,
 tetrahydrofuranyl, furanyl, dioxolanyl, thienyl,

14. A compound according to claim 1, wherein wherein V is $-N(R^1)(R^2)$ and
 R^1 and R^2 are each independently L^1 , wherein L^1 is selected from the
group consisting of H, C_{1-6} alkyl, or

10

R^1 and R^2 together with the nitrogen to which they are attached form
X,

wherein X is piperidinyl or morpholino;

wherein X is substituted with Y, wherein Y is
dioxolanyl, C_{1-4} alkyl or piperidinyl;

15

and wherein X and Y optionally share one
carbon atom and together form a
spirocyclic moiety.

15. A compound according to claim 1, wherein V is $-N(R^1)(R^2)$ and wherein R^1 and
 R^2 are each independently L^1 , wherein L^1 is selected from the group consisting of
H, C_{1-6} alkyl.

20

16. A compound according to claim 1, wherein V is $-N(R^1)(R^2)$ and wherein
 R^1 and R^2 together with the nitrogen to which they are attached form
X,

wherein X is piperidinyl or morpholino;

wherein X is substituted with Y, wherein Y is
dioxolanyl, C_{1-4} alkyl or piperidinyl;

25

and wherein X and Y optionally share one
carbon atom and together form a
spirocyclic moiety.

-286-

16. A compound according to claim 1, wherein V is $-N(R^1)(R^2)$ and wherein R^1 and R^2 together with the nitrogen to which they are attached form X,
wherein X is piperidinyl;
5 wherein X is substituted with Y, wherein Y is piperidinyl.
17. A compound according to claim 1, wherein V is $-N(R^1)(R^2)$ and wherein R^1 and R^2 together with the nitrogen to which they are attached form X,
10 wherein X is morpholino;
wherein X is substituted with Y, wherein Y is C_{1-4} alkyl.
18. A compound according to claim 1, wherein V is $-N(R^1)(R^2)$ and wherein R^1 and R^2 together with the nitrogen to which they are attached form X,
15 wherein X is piperidinyl;
wherein X is substituted with Y, wherein Y is C_{1-4} alkyl.
19. A compound according to claim 1, wherein V is $-N(R^1)(R^2)$ and wherein R^1 and R^2 together with the nitrogen to which they are attached form X,
20 wherein X is piperidinyl;
wherein X is substituted with Y, wherein Y is dioxolanyl;
and wherein X and Y share one carbon atom and together form a spirocyclic moiety.
- 25 20. A compound according to claim 1, wherein R^3 is R^{3a} and R^{3a} is substituted or unsubstituted phenyl, hydroxyphenyl, azetidiny, naphthyl, C_{1-6} alkyl, C_{2-6} alkenyl, C_{2-6} alkynyl, dihydroquinolinonyl, hydroquinolinonyl, quinolinyl,

10 31. A pharmaceutical composition comprising a compound according to claim 1.

32. A method of treating migraine in a patient in need thereof comprising the administration of an antimigraine effective amount of a pharmaceutical composition comprising a compound according to claim 1.

33. An in vivo non-terminal method of identifying anti-migraine compounds
15 comprising administering a CGRP-receptor agonist to a mammal in an amount capable of inducing an increase in blood flow, followed by administering a test compound in an amount capable of reversing said CGRP-induced increase in blood flow, wherein said mammal is a transgenic mammal with humanized RAMP1 having Trp74 or a mammal endogenously expressing RAMP1 having
20 Trp74.

34. An in vivo non-terminal method of identifying anti-migraine compounds comprising administering to a mammal a test compound prior to the delivery of a CGRP-receptor agonist wherein said CGRP-receptor agonist is administered in an amount capable of inducing an increase in blood flow and wherein said test
25 compound is administered in an amount capable of suppressing said CGRP-induced increase in blood flow, wherein said mammal is a transgenic mammal with humanized RAMP1 having Trp74 or a mammal endogenously expressing RAMP1 having Trp74.

35. An in vivo non-terminal method of identifying anti-migraine compounds
30 comprising administering to a mammal a CGRP-receptor agonist in an amount capable of inducing an increase in peripheral artery diameter, followed by administering a test compound in an amount capable of reversing said CGRP-

induced increase in peripheral artery diameter, wherein said mammal is a transgenic mammal with humanized RAMP1 having Trp74 or a mammal endogenously expressing RAMP1 having Trp74.

36. An in vivo non-terminal method of identifying anti-migraine compounds
- 5 comprising administering to a mammal a test compound prior to the delivery of a CGRP-receptor agonist wherein said CGRP-receptor agonist is administered in an amount capable of inducing an increase in peripheral artery diameter and wherein said test compound is administered in an amount capable of suppressing said
- 10 CGRP-induced increase in peripheral artery diameter, wherein said mammal is a transgenic mammal with humanized RAMP1 having Trp74) or a mammal endogenously expressing RAMP1 having Trp74.

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
A	US 6552,043 B1 (PATCHETT et al) 22 April 2003 (22.04.2003), see entire document especially formula I on column 1.	1-36

☐ Further documents are listed in the continuation of Box C.

☐ See patent family annex.

* Special categories of cited documents:	
"A" document defining the general state of the art which is not considered to be of particular relevance	"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"E" earlier application or patent published on or after the international filing date	"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)	"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"O" document referring to an oral disclosure, use, exhibition or other means	"&" document member of the same patent family
"P" document published prior to the international filing date but later than the priority date claimed
